

ODK Seeks System for Membership

The organizational committee of Omicron Delta Kappa, national men's leadership fraternity, is working on a point system for evaluating extra-curricular activities of prospective members, Arthur M. Wellington, ODK advisor, said yesterday.

The group was officially endorsed by the national chapter and is now preparing to submit its constitution to the Senate Committee on Student Affairs for final approval.

If the constitution is approved the chapter will be installed in May.

Simes to Report

Frank J. Simes, dean of men and secretary of the committee, said yesterday that he had written to colleges and universities with ODK chapters to inquire about their point systems. He will make a report of his findings to the next committee meeting on Thursday.

The four students on the seven-man committee, Robert Dennis, Watson Leese, Bruce Lieske, and George Williams, will study phases of student life in order to evaluate student participation in extra-curricular activities. Their reports also will be made at the Thursday meeting.

Five Major Fields

According to the ODK constitution, the five major fields of student life are student government; social and religious affairs; scholarship; publications; forensic and applied arts; and athletics.

The ODK constitution states that any junior or senior man who is scholastically in the upper 35 per cent of the men in his college and who is outstanding in one field of student life or a leader in two or more fields is eligible for membership.

Players--

(Continued from first page) finding out that he is to be hung, rather than released, as he believes.

Karl Held is aggressive, agreeable and audible as Mr. Cartwright. He alone is uncomfortable in the company of criminals and shows it admirably. Held also distinguishes himself in his scenes with Miss Wylie.

William Taylor, as Lord Wainwright, seems to have trouble in projecting his voice to the audience, but he has a fine, cold stance and facial expression to his favor, and he actually does succeed in finally making his way to Laetitia's bedroom.

Emil Haas makes a fierce, small appearance as Mr. Fierce, and Steve Babcock and George Spelvin, as the Bailiffs, are distinguished chiefly by enchantingly dirty feet and burlap clothing.

Two especially appealing facets in making "Children of Darkness" entertaining are the tasteful set and fine lighting. Lighting for the show is beautiful without getting carried away with itself, and the set, with its few essentials, is the epitome of a jailer's home.

"Children of Darkness" lends itself well to arena-type staging; it would probably lose its realistic, "small-room" charm on the Schwab stage. Full houses should bless Players for the next five weekends.

Distribution Of Centennial Issue Outlined

Richard Gordon, circulation manager of the Daily Collegian, has announced the following distribution system for the Collegian's special 48-page Centennial issue:

1. Students living in dorms will receive their copies in their mail box.

2. Copies will be distributed to each fraternity house.

3. Independents may pick up their copies at the Student Union desk in Old Main. This will be the only distribution point for independents. University staff and employees are requested not to take papers from the Student Union desk.

4. Copies will be sold at Graham's for University faculty members and other employees, townspeople, and students desiring extra copies. Price will be 10 cents.

5. Organizations desiring extra copies may call Gordon at the Collegian office, ext. 543. If the organization wishes to have copies delivered Tuesday, it should call before the day of publication.

Reactor --

(Continued from page two)

rods can "shut down" the reactor instantaneously upon impulses sent to them by electronic safety devices. When the rods pick up the impulses, they are automatically dropped into the core to absorb the surplus of neutrons, and stop the chain reaction.

A few of the instances in which the devices will cause the reactor to shut down are: if the nuclear radiation level in the building rises beyond a predetermined level, if the chain reaction increases at too rapid a rate, or if anything goes wrong with the electronic control circuits.

According to Cochran, it would be inconceivable that all the rods would not fall into the core to stop the reaction. In other words, the reactor has about as much chance of failing as a person has of making a phone call with a nickel.

Calculations and tests have been conducted on what would happen if all the safety devices did fail at the same time.

"The worst that could happen would be that the reaction would boil the water in the pool and thus automatically cease operation," Cochran explained. "In this process no radioactive material would be released from the reactor core," he said.

The nuclear reactor is to be used at the University mainly for research. Nuclear engineers will be trained in the use of the instrument and research will be conducted in many fields. Several de-

Cabinet --

Group Parking

2. Simplification of the present parking system to provide for group parking in one area insofar as possible.

3. Relaxation of parking regulations during weekends and other slack periods when parking and traffic conditions are not at a peak.

4. Methods of eliminating "dead" parking.

5. Methods of extending or recommending the extension of present commercial transportation facilities both in and out of State College.

6. Methods of providing an extension of parking areas, commensurate with the overall expansion of the University.

Correcting Abuses

7. Methods of correcting abuses and stabilizing present systems of enforcement of traffic regulations.

8. Any other field of investigation which the committee may deem feasible in determining ways and means of alleviating the present problem.

Cabinet voted to give \$200 to the Religion-in-Life program. The money was requested in a letter from the committee of 13 appointed by President Milton S. Eisenhower to study the program. The money was requested by Robert Homan, All-University secretary-treasurer. The motion must also be voted on next week because any appropriation over \$200 must be passed in two consecutive Cabinet meetings.

In further action, Cabinet accepted the Community Forum report. At the last meeting, one word was omitted and the report could not be voted on.

Symposium--

aerodynamics.

Dr. Ferre was born in Sweden. A graduate of Boston University, he received his M.A. and Ph.D. degrees from Harvard University. He also studied at the Universities of Uppsala and Lund in Sweden. Before going to Vanderbilt, he taught at Andover Newton Theological Seminary where he received his D.D.

Dr. Ferree is the author of 12 books on religious subjects and has done extensive research in religious philosophy. He was the recipient of a Carnegie Research Grant in 1950.

Departments already have experimental projects planned. Some of these are chemistry, physics, biology and the nuclear engineering staff of the College of Engineering and Architecture.

Centennial Sales Reported Drawing Large Crowds

First reports from Area Chamber of Commerce members indicated a large turnout of shoppers for the Centennial Sales Days which started yesterday in 59 State College businesses.

Some of the stores have decorated their interiors with appropriate signs, and clerks are wearing costumes reminiscent of a century ago. The painted front glass doors on one store resembled the old-time tavern-type swinging doors.

Most of the stores priced their bargains to resemble prices of the old days, Robert Liggett, chairman of the retail affairs committee, said.

The sale will continue through regular business hours today.

Chapel--
