Parts, Units Purchased By WDFM

The engineering staff of student radio station WDFM has obtained interchangeable parts and units for the transmitters used in the dormitories, according to James Raleigh, chief engineer.

If anything goes wrong now in any one of the four parts of a transmitter, that part may be taken out for repair and another substituted, he said.

Chassis Contain Tubes

Each of the transmitters is divided into four chassis, or aluminum boxes, which contain the tubes and other mechanisms.

The five transmitters are located in Waring Hall, McAllister Hall, Women's Building, Atherton Hall, Woman's Building, Atherton Hall, and McElwain Hall. The unit in Waring Hall serves the West Dorm area. The one in McElwain Hall serves that dormitory and Simmons Hall.

The transmitters change the station signals to AM signals.

New Chassis Operating

A newly-obtained chassis is operating in the place of one of the parts of the Waring Hall unit. The part which has been removed is being repaired by the staff engineers.

Raleigh explained that the station has had little trouble this week outside of routine tube failures and what can be expected of a newly operating radio station.

A staff of dormitory reporters listen to the station in the dormitories and report on any trouble in the transmission.
