

'What's This?' Answer

The base of the flag pole in front of Old Main certainly does not look familiar without the pole. Army ROTC students should remember this welcome seat. It is not uncommon to see them resting there during their 10-minute break.

Correction

It was erroneously reported in yesterday's Daily Collegian that the closest commercial airport to State College was at Tyrone. The closest commercial airport is at Philipsburg.

LOCKHEED

Aircraft Corporation

California Division • Georgia Division

Staff Representatives will be on campus to discuss your future

Tuesday, October 9

In Lockheed's expanding research and development program.

Separate interviews will be given for each division.

Both divisions of Lockheed are engaged in a long-range expansion program in their fields of endeavor.

California Division activities in Burbank cover virtually every phase of commercial and military aircraft. Seventeen different models of planes are in production, including cargo and passenger transports, high Mach performance fighters, jet trainers, radar search planes, patrol bombers.

B. S. graduates who wish to attain a Master's Degree will be interested in the California Division's Masters-Degree Work-Study Program. In the program, participants achieve their M.S. while working concurrently on Lockheed's engineering staff.

At Lockheed in Marietta, Georgia, new C-130A turbo-prop transports and B-47 jet bombers are being manufactured in the country's largest aircraft plant under one roof. The division is already one of the South's largest industries. Moreover, a new engineering center is now in development as part of the division's expansion program. In addition, advanced research and development are underway on nuclear energy and its relationship to aircraft. A number of other highly significant classified projects augment the extensive production program.

This broad expansion program is creating new positions in each division. Graduates in fields of: Aeronautical Engineering, Electrical Engineering, Mechanical Engineering, Mathematics and Physics are invited to investigate their role in Lockheed's expansion.
