

Eisenhower Wins Poll—Physicists—

(Continued from page one) Eisenhower and Nixon asked, "Is there really any choice of candidates to select from?"

Another, thinking along the same lines, commented that both vice presidential candidates were very poor.

"War will swing the election to Eisenhower because the American people want a military man in office," predicted a "voter."

'Lesser of 2 Evils' One of the more pessimistic attitudes was expressed by the student who said: "Adlai Stevenson, if elected, would lead the country to disaster. The Ike-Nixon ticket is the lesser of the two evils."

The Democratic voters, in general, were of the opinion that it is "time for a change," and that the Democratic ticket was the only way to vote because the candidates were much better qualified to hold the offices of President and Vice President.

The comments most frequently raised denouncing the present administration were on Eisenhower's lack of foresight in world affairs, Republican foreign policy, and GOP favoritism to the big business man.

Tired of 'Puppet President' "I'm tired of a puppet-type president," was the comment of one staunch Democratic student.

"Ike is sincere but ignorant; Stevenson is sincere, but intelligent and informed," said another student.

"Who wants tricky Dick and all the foreign affairs and failures of the aristocrats. Remember the poor farmers!" was the admonition of another student voter.

Foreign Policy 'Untrustworthy' Referring to the world situation one student said:

"With the courageous revolts defying communism in Central Europe, at present, the countries will need a friendly, helpful, truthful country for aid. Can they trust the U.S. with its present-day foreign policy? They won't. We must be decisive."

"I do not like Nixon's tactics and although I am a Republican, I don't think the party's representatives can compare to those of the Democratic parties," said one "turn-coat" voter.

One voter foresaw the decline of America's power in world affairs unless "someone takes command who knows the world situation and can act intelligently." An estimated 61 million or

more voters today will decide whether to continue Republican Eisenhower in the White House or replace him with Democrat Stevenson.

The voters will also decide which party shall control Congress in the next two years.

Comparisons between the nation's voting and University student-voting should prove interesting!

Work on Dam Will End Soon

Dr. Maurice K. Goddard, Secretary of the State Department of Forests and Waters, explained yesterday that the Whipple Dam drainage project should be completed within a few months.

Dr. Goddard, currently on leave from his position as director of the School of Forestry, explained the Whipple Dam project during his address before the faculty luncheon yesterday.

The dam, Goddard said, was drained in order that the Forestry Department could improve the recreation facilities of the area. The improvements include a widening of the beach around the dam, and the filling in of large holes in the bottom of the lake.

Dr. Goddard said the project would be completed in time for the lake to be used for ice skating this winter. The Forestry Department undertook this project in the fall, he said, in order to interfere as little as possible with the recreational activities at the dam.

(Continued from page one) choice than the "Everything-for-Everybody-for-Free" promises of Stevenson," was the comment of another Eisenhower voter.

One student who voted for but controlled war."

"The Russian bloc has a superiority in man power," he said. "Therefore we are safe only as long as we maintain superior weapons or until adequate inspection systems are operating."

Slow Armaments Race

Dr. Rolf Winter, assistant professor of physics, said that if the tests are halted, "the advantage would be the slowing of the armaments race and a demonstration of peaceful intentions for the benefit of neutral nations and wavering elements of the Communist bloc. Radiation hazards would of course decrease, but at present levels they are not very important."

Helen Unterleitner, graduate student in physics, said "the extent to which the tests are a health hazard, particularly genetically, is unknown. A great deal can be done in the way of development of weapons without testing. Discontinuation of testing does not necessarily mean discontinuation of research."

Grim Process

Ralph Haslund, graduate student in physics, who has been directly connected with research in this field for the past four years, claims that this nuclear research "is a grim process" because of its potential nature. Because of the uncertain af-

fects that the radiation might produce, he said, testing should be kept at an absolute minimum.

UN Decision

Dr. H. David Rix, associate professor of physics, said that the United States should not pollute the atmosphere of other nations without their consent.

This issue, he believes, should be discussed and voted upon by the United Nations.

Panhel Council to Meet

The Panhellenic Council will meet at 6:30 tonight in 203 Hetzel Union.

Red Scholars--

(Continued from page six) him to visit them after dark and in inconspicuous places.

Dr. Thaden, who joined the University faculty in 1952, specializes in 19th century Russian history. He is the author of articles on "Romantic Nationalism in Russia" and "Russian Foreign Policy in Constantinople."

He was graduated from the University of Washington and studied at the Universities of Zurich and Paris, receiving his doctor of philosophy degree from the latter.

A GUIDE FOR THE UNMONEYED

R. L. Sigafos was a keen, ambitious lad, and when he finished high school he wished mightily to go on with his education. It seemed, however, a forlorn hope. Crop failures had brought his father to the brink of disaster. (R. L.'s father raised date palms which, in North Dakota, is a form of agriculture fraught with risk.) Nor could R. L.'s mother help; she had grown torpid since the death of Rudolph Valentino.

R. L. could go to college only if he worked his way through. This was a prospect that dismayed him.

Racked with misgivings, R. L. paced the streets, pondering his dilemma. One day, walking and brooding, he came upon a park bench and sat down and lit a Philip Morris. (There is no occasion, happy or sad, pensive or exuberant, when Philip Morris is not entirely welcome, as you will discover when you go to your favorite tobacco counter and buy some.)

R. L. was suddenly interrupted by a small, quavering voice which said, "My boy, you are troubled. Can I help?"

Seated beside R. L. was a tiny, gnarled man with wispy, snow-white hair. His skin was almost transparent, showing a delicate tracery of fragile bones beneath. His back was bent, and his hands trembled. "Do you think, sir," said R. L., "that a boy can work his way through college and still enjoy a rich, full campus life?"

"Why, bless you, son," replied the stranger with a rheumy chuckle, "of course. In fact, I did it myself."

"Was it very hard?" asked R. L.

"Yes, it was hard," the stranger admitted. "But when one is young, all things are possible. I, for example, used to get up at five o'clock every morning to stoke the furnace at the SAE house. At six I had to milk the ewes at the school of animal husbandry. At seven I gave a fencing lesson to the Dean of Women. At eight I had a class in early Runic poets. At nine I gave haircuts at the Gamma Phi Beta house. At ten I had differential calculus. At eleven I posed for a life class. At twelve I watered soup at the Union. At one I had a class in Oriental languages. At two I exercised the mice in psych lab. At three I gave the Dean of Women another fencing lesson. At four I had qualitative analysis. At five I went clamming. At six I cut meat for the football team. At seven I ushered at the movies. At eight I had my ears pierced so that at nine I could tell fortunes in a gypsy tea room. At ten I had a class in astronomy. At eleven I tucked in the football team. At twelve I studied and at three I went to sleep."

"Sir," cried R. L., "I am moved and inspired by your shining example!"

"It was nothing," said the stranger modestly, shaking his frail white head. "It was just hard work, and hard work never hurt anybody."

"Would you mind telling me, sir," said R. L., "how old you are now?"

"Twenty-two," said the stranger.

"Egypt and Israel" Film to Be Shown

"Egypt and Israel," a film by Edward R. Morrow, will be presented at 7:45 p.m. Sunday in the Mineral Sciences Auditorium.

The showing of the 90-minute documentary film is sponsored by the instructional Committee on International Understanding.

The film is intended to be the first of a new series entitled, "International Film and Forum." The series is open to the public.

MI Student Council to Meet

The Mineral Industries Student Council will meet at 8 tonight in 101 Willard.
