

# LeSage Analyzes Individualist

Dr. Laurent LeSage, professor of Romance languages, said Sunday night that an individualist such as Andre Gide should be listened to, but at the same time should be kept "at a respectable distance."

In a speech, "Freedom to Be Yourself," Dr. LeSage said that Gide had many good things to say about individuality, but also said that he carried the idea to extremes.

### "Throw the Book Away"

Gide himself advised his readers to "listen, and then throw the book away."

Gide, who Dr. LeSage said was "of the stuff of martyrs," very early became austere in his self-discipline. During his early years, Dr. LeSage said, Gide decided he would permit himself "no easy victories."

Satisfaction, too, was despised and avoided by Gide, Dr. LeSage said. Determined that contentment was evil, Gide once said, "You can expect nothing from satisfied people," and he conducted his life and thinking accordingly.

Dr. LeSage said that much of Gide's thinking was naive.

His naivety was shown, Dr. LeSage said, when he tried to tell the Soviets once that "Communism could succeed only if they recognized differences in individuals."

Gide said this on a trip to Russia in the 1930's while he was a devoted Communist. His statement was in a speech he planned to deliver to a Moscow audience. However, his Soviet hosts did not allow it to be presented.

Gide then returned to France, completely disillusioned in Communism, and pronounced his break with it.

### Family, Church Obstacles

Dr. LeSage said that Gide attacked both the family and the church as obstacles to individual freedom.

He even held, Dr. LeSage said, that "Communism was made ne-

cessary, by the failure of the church."

Outlining Gide's individualism, Dr. LeSage said it was a belief in freedom for the elite only, not for the masses. It was also an individualism that demanded certain responsibilities, Dr. LeSage said.

For Gide said that every man must make his own decisions and must seek nothing to cling to outside of himself.

Offers Engineers Many Advantages!

When The Pilot Can't See

"Volscan" Brings Him Down ...

SAFELY! SURELY!

One of the major advances in aviation history is "Volscan." This remarkable electronic device enables the pilot to come in even though he can't see where he is or where he is going. Wouldn't you like to play a part in important achievements like this? If so, we have openings for engineers in many different categories.

Openings at all levels of Research, Advanced Development and Product Engineering in the following fields: Guided Missiles, Air Navigation, Radar Systems, Communications, Gyros, Magnetic Amplifiers, Servos, Computers, UHF, VHF, Printed Circuitry, Circuit Design, Transistor Circuitry, Fire-Control Systems, Infra-Red Radiation, Detection Nucleonics, and Human Engineering.
