AiResearch jet pump "shoots air bullets" to increase efficiency of refrigeration units

The Garrett Corporation comprises one of the most unique and diverse research, engineering and manufacturing organizations in the world.

The parent company, founded in 1936, has grown from three persons to nearly 10,000 scientists, engineers and production specialists. From the AiResearch laboratories have come the pioneer developments in aircraft components and systems which have pushed back the barriers of speed and altitude. Today, 90 per cent of the free world's aircraft carry this equipment.

Divisions and subsidiaries are also engaged in creating industrial products in such varied fields as marine equipment and turbochargers for diesels, and in supplying sales and installation engineering services to airframe companies, airlines and the military.

Through foreign licensees, Garrett's products and engineering services now circle the globe.

Garrett's growth has been rapid and its position sound and stable, mainly because of the creative ability and ideas of its engineers.

TYPICAL PROJECT ACTIVITIES

Gas turbine auxiliary pneumatic and electric power units.
 Electronic air data computers, pressure ratio transducer instruments, electrical systems and motors and generators.
 Air and vapor cycle refrigeration turbines, hydraulic and mechanically driven pressurization compressors.
 Auxiliary power units and control systems for

various types of missiles.
 Jet engine and rotating machinery design and analysis involving combustion, turbomachinery, gas dynamics, thermodynamics and aerodynamics.
 Preliminary design from analytical and theoretical considerations for high-level technical work in aerodynamics, stress analysis, thermodynamics, heat transfer, nuclear power and mathematics.
