

Sixty Brubeck Tickets Remain Thespian Show—

About 60 tickets for the Dave Brubeck jazz concert will be available to students from 9 a.m. to noon and from 1 p.m. to 5 p.m., today at the Hetzel Union desk.

Tickets also will be on sale to non-students at the same hours. The price of these tickets is \$1 each. Students must present their activity-identification card to get tickets.

The Brubeck Quartet will present the third concert in the student-sponsored Artist's Series at 8:30 p.m. Sunday in Recreation Hall.

The quartet is headed by Brubeck at the piano, with Paul Desmond on alto saxophone, Joe Morello on drums and Norman Bates on bass. Desmond also plays clarinet and piano.

Brubeck, 36, was born in Concord, Calif. His mother and two older brothers were accomplished

Dave Brubeck
To Appear Sunday

musicians. He revolted against music and began to study pre-medicine at the College of the Pacific. In his sophomore year he switched to music and graduated with a degree in it.

Following service in France during World War II, he studied at the graduate school of Mills

College, where Darius Milhaud encouraged him to use jazz in his composition assignments.

A group of Mills students formed a workshop band for experimentation, which became the Dave Brubeck Octet. The three members of the rhythm section of this group began playing on a San Francisco radio show. In 1951 when Desmond joined the three, the Brubeck Quartet was born.

The quartet has won top honors in popularity polls conducted by Metronome, Playboy and Down Beat magazines since 1952. It has been credited with strongly influencing young musicians in the development of contemporary jazz.

The quartet spends six months a year touring the United States and Canada. The other six months are spent in the San Francisco Bay area, rehearsing, composing and preparing for the coming tour.

60-yard drop-kick field goal.

Richard Christian established his talent as a ventriloquist performing for the "TGIF Club"; but Friday's and Saturday's audiences will find out the answer to the question: "Why did Thursday's audience hesitate to laugh?" It could be said that Christian's routine was "in bad taste," whatever that is.

The show was troubled with eight major substitutions for people stricken with colds or flu. As a result, many potentially good scenes and numbers were disappointing.

However, no amount of sudden good health will help the last scene in the show, "Final Examinations," which was an unsuccessful take-off on big-money quiz shows. The idea of the "quiz show" was to determine students' final grades at graduation. But neither the questions nor the answers were very clever.

Phoebe English's choreography was top-notch in "La Mess." This was a number in which four coed dancers step in and out of paint buckets to music under the directions of the "noted artist," Spicasso, producing a "modern masterpiece," aptly entitled, "La Mess."

The Thespian orchestra was badly depleted by the flu—it was short four saxophones, a bass and a trumpet—so the di-

rectors of the show might find it a worthwhile suggestion to use the show's more lively numbers for the short overture to the second act. The orchestra really missed the instruments and lost much on the slow numbers used, especially when the audience needed a fast introduction.

On the whole, "A Great Future" is weak. To save the show at its second and third performances the action will have to be stepped up. No audience in the world likes to sit and wait for things to happen.

There is a lot of good talent in the show but the material is not, certainly, top-notch.

Nelson Presents Article

Clifford A. Nelson, associate professor of accounting, presented a paper on "Training Office Employees" at a recent Efficient Terminal Management course conducted here by the Institute of Public Safety.

USE COLLEGIAN CLASSIFIEDS

Yusuf A. Yoler joined General Electric's Missile and Ordnance Systems Department in 1955, after receiving his B. S. in E. E. from Robert College, Istanbul, Turkey (1949), and his Ph. D. from the California Institute of Technology (1954).

"In a big company, a young man can get to tackle big jobs"

"The thing that has impressed me most in my two years at General Electric," says 28-year-old Yusuf A. Yoler, manager of Aerodynamics Laboratory Investigations, "is the challenging opportunity open to young people here. My field is guided-missile research—the nation's top-priority defense job. Because of the scope of the company's research and development program, I've had the opportunity to work with technical experts in many related fields. And I've seen at first hand the responsibility which General Electric has given to younger men—proof to me that in a big company a young man can get to tackle big jobs."

The research being done by Dr. Yusuf A. Yoler is significant not only to himself, but to General Electric and the security of the nation as well. At present, the company is participating as a prime contractor on three of the four long-range ballistic missiles pro-

grammed by the U. S. government. Yoler, who is playing an important role in this work, directed the design and development of the world's largest hypersonic shock tunnel—a device which will "test-fly" missile nose cones at speeds over 15,000 mph.

Progress in research and development—as well as in every other field of endeavor—depends on how well young minds meet the challenge of self-development. At General Electric there are more than 29,000 college graduates, each of whom is given the opportunity to develop to his fullest abilities. In this way, we believe, everybody benefits—the individual, the company, and the country.

Progress Is Our Most Important Product
