

# Japanese Students Coming To Talk At University

Three traveling Japanese students will be on campus July 19-21 to talk with students and introduce Japan and Japanese culture as it is today through films and colored slides.

The visiting trio, which will be hosted by the Student Government Association, is making a tour of 32 American universities and colleges during the summer in an effort to bring closer relations and understanding between students of the two nations.

They will show their films and slides of a typical Japanese Inn, Japanese family and Japanese culture at 8:15 p.m. Wednesday in the Hetzel Union assembly room. A coffee hour for informal discussion will follow in the HUB main lounge.

The invitation for the group to visit Penn State was first extended by Jay Feldstein, then president of the student body. The three encountered difficulties getting visas and their trip was delayed.

The invitation was re-extended

## Hartsook Serves In South America

E. W. Hartsook, University scientist, is serving as a nutritional consultant in Colombia, South America, during the summer. Dr. Hartsook conducts animal nutrition studies for the State Agricultural Experiment Station.

Dr. Hartsook will work with a team of scientists to assess the nutritional status of military and civilian populations of Colombia. The team will check the amount and quality of food supplies and the methods and equipment used in food processing and storage.

# Niebel Patents Surgical Aid

Benjamin W. Niebel, professor of industrial engineering at the University, with the aid of Dr. Forney D. Winner, a Lock Haven surgeon, has patented a surgical device to remove stones lodged in the body conduits.

The instrument will provide an easier method of removing stones and decrease the period of sickness, hospital stay, and mortality rate due to the operation.

The device, called a "calculus disintegrator", is designed to replace extensive surgical work, probing and similar methods of removing stones.

The instrument consists of a rotatable shaft encased in a plastic sheath driven by an explosion-proof, speed controlled motor which moved a carbon twist drill with a lateral piece of carbide brazed to its shank. After the drill pierces the stone, the carbide completely disintegrates it into dustlike particles.

by SGA president Leonard Julius last year and final plans were carried out by Richard Haber, current SGA president.

The Japanese students are sponsored by the Experiment in International Living and the Asia Foundation. Two of the students are from Keio University and one from Chuo University in Tokyo.

## Fruit Disease Research Assisted by Donations

Research on fruit diseases at the Adams County Fruit Research Laboratory of the University will be assisted by two grants received from chemical companies.

The American Cyanamid Company of New York has donated \$975 and the General Chemicals Division of New York has given \$250 for this research.

The laboratory's fruit disease studies are under the direction of Dr. F. H. Lewis, professor of entomology.

# Washko To Attend Grassland Council

Dr. John B. Washko, professor of agronomy and president of the American Grassland Council will attend the 8th International Grassland Congress in Reading, England, July 11 to 21.

Dr. Washko will speak on nitrogen fertilization studies he has conducted jointly with Dr. Lawrence F. Marriott. The forage crops researcher has a travel grant from the National Science Foundation to pay part of his expenses.

He will take part in a pre-congress tour of agricultural experiment stations in England, Northern Ireland, and North Wales. Later he will visit additional grassland research headquarters throughout Europe.
