

HONEST, I DIDN'T mean to hit the University's parking signs! Visitors parking signs in a lot directly behind Walker Lab show the wear and tear of continuous "meetings" with errant autos. Several of the signs have already succumbed from the battle.

Osborn Explains Science Building

Special facilities for re-damage to cells as related to search on ground water will war; control of harmful insects be included in the proposed by high intensity sound; and the search of harmful insects by high intensity sound; and the search of earth sciences building, E. F. role of bats in the transmission of Osborn, vice president for research, said yesterday.

He said the ground water problem is a matter of major concern in Pennsylvania and facilities for studying methods of conservation and purification of municipal, industrial, and agricultural water supplies will be included in the new buildings.

The \$3,187,500 building was aproved last month by the General State Authority after the National Science Foundation awarded a grant of \$600,000 toward construction of the project. The building had been requested by the University for the 1963-85 budget.

The grant is believed to be the largest made by the National Science Foundation to aid universities in providing research and graduate training facilities, Osborn said.

Facilities for exploring new uses for lower grade coal will also be included in the building. These will include facilities for study-ing the selection and blending of coals for manufacturing coke, he

Other projects include develop ing industrial uses for Pennsylvania claps, limestones and other mineral resources: high temperature geochemistry research; ultra-high pressure research for the development and study of new types of materials; geography re-search on petroleum reservoirs to explore new possibilities for the secondary recovery of Pennsylvania oils.

The new unit will also provide facilities for a weather station, seismological laboratory, libary, lecture halls with preparation rooms, classrooms and of-

The new life science building which was also approved by the GSA last month, will include facilities for expanded research in zoology, physiology and biophys ics, Osborn said.

More complete facilities than originally intended will be made possible, he said, because of an \$831,690 grant from the National Institute of Health.

Some of the research studies which will be expanded by construction of the new building are the biological effect of radiation

Vastola to Study Coal

Basic chemical constituents of Penns Ilvania bituminous coal are being identified by Dr. F. Vastola, assistant professor of fuel technology, in a research project sponsored by the Pennsyl vania Department of Mines and Mineral Industries. He has received a grant of \$7,500 from that agency.
