Highways . . . of electric power

This is Pennsylvania's "highway system" of electric power . . . ready for any demand or any emergency. The lines charted on this map are part of the great electric grid that covers the nation, connecting the facilities of more than 100 investor-owned electric companies.

This vast network of power is a reality today because the forward-looking, business-managed electric industry planned it that way. And now, even greater facilities are under construction or on the drawing boards, to secure the nation's power future for many years ahead.

Over the next 20 years electric utility companies will be spending more than \$143 billion for construction of facilities. This money will come, not from taxes but from voluntary investment by individuals who have faith in the performance of an industry which has always been ready to meet all power demands . . . which has continuously contributed to a higher standard of living at progressively lower cost.

PENNSYLVANIA ELECTRIC ASSOCIATION

20 Independent, Investor-Owned Electric Companies of Pennsylvania
