

Research Review

Women Evaluate Fabric Quality

By ELLEN BRADLEY

Different qualities of cotton fabrics within one price range can save the buyer if he can distinguish between the superior and the inferior qualities of material.

This conclusion was drawn from a pilot study conducted in the College of Home Economics. A larger study to determine the ability of women to judge quality in fabrics is now being conducted.

The pilot study, an unpublished master's thesis, conducted comparison tests with home economics and liberal arts students. While the home economics students were more consistent in their ranking of the fabrics being tested, both groups gave better ranking when information concerning the fabric was on the label, Miss Densmore said.

The first set of each type of fabric was ranked without the aid of label information. The second set of each type of fabric was ranked with the aid of the information found on the label except for the price, and the third was labeled with the price only.

LABORATORY evaluation of such properties as color fastness, shrinkage, strength and appearance after laundering will give information about the actual quality of the fabrics purchased.

of fabrics and indicate their reasons for ranking the highest one at the top and the lowest one at the bottom. Cotton broadcloth, percale and gingham in sets of five were ranked.

Students who need transportation to the reception are requested to call AD 8-1818, AD 7-2957 or AD 7-2892.

The concert is part of the State College Choral Society's 12th annual Chamber Music Series. Tickets, which are sold for the entire series only, may be purchased until tomorrow at Keeler's, the Music Mart or at the Hetzel Union desk.
