"What responsibilities will you start with at W. E.?"

Exciting ones. With plenty of room for your professional development. Western Electric's business depends on new ideas. And new engineers take responsible, immediate part in projects that implement the entire art of telephony — including electronic telephone offices, computer-controlled production techniques and microwave transmission. On many of these exciting advances in communications, Western's engineers work closely with engineers from our research team-mate, Bell Telephone Laboratories. For Western Electric to maintain the Bell System's ultra-high quality standards, extraordinary manufacturing, process and testing techniques are required. Opportunities for fast-moving careers exist now for electrical, mechanical and industrial engineers, and also for physical science, liberal arts and business majors.

For more detailed information, get your copy of the Western Electric career opportunities booklet from your Placement Officer. Or write College Relations Coordinator, Western Electric Company, Room 6306, 222 Broadway, New York 38, New York. And be sure to arrange for a personal interview when the Bell System recruiting team comes to visit your campus this year—or during your senior year.
