

Librarians Attend ARL

Representatives of the University library staff recently attended their first meeting of the Association of Research Libraries since Penn State's election into the organization June 18.

Ralph W. McComb, University librarian, and Mrs. Margaret K. Spangler, assistant librarian, participated in the 60th session of the ARL on Jan. 27 in Chicago.

The ARL is composed of 72 libraries in the United States and

Canada. Membership, which is by invitation, includes the principal university libraries and several large non-university institutions with outstanding research facilities.

For more than 30 years the association has been the principal organization of the major research libraries of the country. Its primary efforts have been in the building and strengthening of research library collections.

Dow to Conduct Ag, BusAd Student Interviews

Hillard L. Smith, of the Dow Chemical Company, will be at the University today and tomorrow to interview interested seniors in agriculture, and graduate students in agriculture and business administration.

Any student interested in an

interview should report to 210 Armsby this morning. Interviews will be conducted all day beginning at 8:15 a.m.

School-district representatives will also be at the University from the following schools to interview prospective teachers: Feb. 11-12, Pittsburgh schools, Pittsburgh;

Feb. 12, Prince George's County, Upper Marlboro, Maryland; Feb. 14, Board of Education, Cleveland, Ohio; Feb. 15, Riverside City Schools, Riverside, California.

Contact the Teacher Placement Office, 103 Burrowes, for an appointment or more information.

Result: "Cushion Recoil" provides a dramatically smoother ride in 1963 Ford-built cars

The challenge given Ford engineers was to design suspensions that would permit wheels virtually to roll with the punches—not only in a vertical plane but fore-and-aft as well. Conventional suspension systems provide only a partial solution to road shocks by limiting wheel recoil to an up-and-down motion.

The solution? Exclusive Cushion Recoil suspension design in all Ford-built cars for '63! Cushion Recoil, with cushioning action in a fore-and-aft plane as well as vertical, smoothes the jars and jolts of rough roads, adds to your comfort, safety, and driving pleasure. Even the thump of freeway tar strips is reduced, and on deeply rutted roads you experience better control of the car. Furthermore, your Ford-built car is spared the wear and tear of road-induced vibration.

Another assignment completed—one more example of engineering excellence at Ford and new ideas for the American Road.

SOAKS UP ROAD SHOCK. Exclusive Ford Motor Company Cushion Recoil action moves back as well as up for a smoother ride.
