SIX CENTS

Group Considers Professor Rating System Problem

By CECELIA HITTE

At least one long-enduring compl int of University students is well on its way toward a solution.

The much discussed, but never solved problem of a practical method of evaluating the merits of University faculty has been quietly under consideration since 1958 by a committee appointed by President Eric A. Walker.

The Committee on How to Recognize Good Teachers and Measure Teaching Ability, consisting of representatives from each of the ten colleges at the University, published its initial report. Evaluation of Teaching Effectiveness, in June, 1960, after extensive experience with pilot tests.

This report contains four measures judged by the committee to be important.

Random Sampling

"Delayed Student Opinions," one of the four methods of evalation indicated, involves "a random sampling of students" opinions obtained about two years after they have com-pleted a course." The "hindsight" given the student by this two-year interim period enables him to see the usefulness of the information and training in later courses. Removal from the anxiety and emotion of the course grade which might in some way influence his views was also felt to benefit the accuracy of the evaluation.

The opinions of a teacher's colleagues, made on an overall basis such as clearness of preparation, knowledge of an mass such as clearness of pre-aration, knowledge of subject matter, and attitude toward stydents would provide a counter-balance for the first method. Also suggested as de-sirable, are classroom visits, followed by interviews, provided there are a substantial number of visits.

Student Performance

A more direct measurement of a teacher's efectiveness considered by the committee is the performance of his students on examinations designed to measure achievement regarding specific objectives of the course and overall objectives of the University. Until the development of such tests, direct comparison, particularly among multiple-section courses which have common course plans and final examinations, can be employed.

The achievements of students ir, subsequent courses is a second direct measure of a teacher's effectiveness. As the report explains, "Almost all previous experience (instruc-tion) has some bearing on the future success of students. However, the idea here is to consider only the relationships between the preference in success of the relationships between the performance in a course, and the performance in its listed prerequisites.

Total Evaluation

Concerning the total evaluation of a teacher on all four of these points, Otis E. Lancaster, Westinghouse professor of engineering and chairman of the committee, explained, four points. They would tend to counter-balance each other. None would be outstanding in all of them."

Among the pilot studies conducted as a background for the 1960 report was an evaluation of the teaching of fifteen instructors and professors of English composition. Using the four previously mentioned points, it way found that "the raw data, alone, were not sufficient to determine the best and poorest instruction.

However, if a correction were made for the curriculum interests of the students ,as determined from all the students' records in corresponding curriculums, where the differences were as much as 14 per cent between curriculums for students of similar ability, the data were found to be satisfactory for identifying desirable instruction results.

To prevent any attempt to correlate the information with a particular student, the identifying numbers on the orinion-naires were torn off by the student upon receiving the information.

AN UNEXPECTED GUEST dropped into the apartment of R. T. Yoder, a former University student, at 224 Bradley Ave. Thursday afternoon. Driver of the automobile, James J. Gregory, suffered severe injuries in the accident. Although the car hit the

'100,000 Pennsylvanians' **Drive Approaches 4500**

By ANN WORRALL

Enrollment in the week old "100,000 membership drive is ap-Pennsylvanians" proaching 4.500. However, the Undergradua-ate Student Government committee chair-man, Victor Hammel predicts a still larger response when all the petitions are returned next week.

The campaign was officially scheduled to end yesterday at midnight, but due to the number of unreturned petitions the USG committee will collect signatures next week. The fraternity area has thrown its sup-port behind the drive and has raised the

membership tally by approximately 2,900 The University Party executive commit-tee and Androcles hat society yesterday en-

dorsed the program. Major Organization

not controversial and provides a chance to support your home state and the University."

A list of those signatures collected before the end of spring term will be sent to Harris-burg to be officially enrolled in the "100.000 Pennsylvanians for Economic Growth" pro-gram. Members will receive a certificate of membership, an automobile bumper sticker and the project's quarterly newsletter, "Punnet/leane Ambassador" "Pennsylvania Ambassador."

Numbers in Fall Total number of signatures collected will be available to students in the fall. The goal of the USG project is one hundred per cent

enrollment at the University. According to Hammel, petitions are still available at the HUB desk and in each resi-dent hall, sorority and fraternity. These groups which have shown con-

Election Code Squabble

Cressman Says Revision Needed

Edward Cressman, Undergraduate Student Government elections commissioner, said yesterday, he will remain in his post in order to work for a congressional acceptance of an election code revision. Thursday night, at the last USG meeting of the term, a revision Cressman presented

met complete delcat. The re-vision sought to place the problem of election campaign expenses within the hands of the Election Commission.

Under the defeated proposal, the commission would have accepted bids from local printers and would then name the print-er to receive campaign orders This section was entirely cut

by congress Thursday night. The congress briefly consider-ed raising the party budget, and then tabled the matter until next fall.

Procrastination Speaking for Congress action on this matter Cressman said,

"I think their action regarding the elections code was the epitome of indecisive pro-crastination."

He also stressed the expediency of elections revision. "By putting it off until the fall," he said, "Congress will not have enough time to imple-ment it for fall elections." ment it for fall elections. Cressman said he will not compromise on this issue. If the code is not passed by their congress, he said, "I'll wait until a new congress is elect-

The main argument put forth against this revision. Cressman said, was that it was an infringement of "party responsibility" Hi responsibility Hi this is that "partics are not

responsible, they in been and they will continue not characterized the past elec-tions will be allowed to occur agam

Receiving bids from printers Receiving bids from printers in State College, he said, was not an inconvenience. "The only body this will inconven-ience," he added, "is the Elec-tions Commission, which is obviously willing to take on the responsibility." Speaking of the section on party lists also defeated by

party lists, also defeated by congress, he said this was placed in the code as a direct result of complaints from par-

ties. Membership lists, according would have to the revision, would have been placed in the hands of the Election Commission, and made available only to party chairman "If they don't want it." said Cressman, "that's the way it is It was for their benefit "

R o b c r t Katzenstein, USG president, and Jim Caplan, iown congressman who op-posed the revision at Thursday's meeting, were unavail-

able for comment. Cressman said the vice chairman of the Election Com-mission. Daniel Katz, was presently looking into obtaining voting machines for fall elections Katz contacted Centre County officials and was turned down, he said. Two companies in New York, he said, were willing to cooperate for a "nominal charge"

pus, he said, are not run like parties. "For every election I've ever been in here, the parties have shown nothing but irresponsibility."

The parties would not gain their responsibility by lifting the campaign budget, he said. "Campaigns aren't poor for lack of funds" he added, "it's matter of using funds the right way and organizing campaigns efficiently.

Another a r g u m e n t used against the revision, he said, was that it placed too much power in the Elections Commission. But if the code was not passed, he stated, the the matter is presently being "many infractions that have investigated.

According to Lancaster, "In this study we were careful to see that the students selected actually responded. The opinionnaires used were numbered somewhat as ballots are for an election. It was found that a random sample of about 40 of all students taught by an instructor is sufficient to get a reliable rating of their opinions. When students didn't respond they were contacted a second time.

James E. Wright, professor of genetics, offers this explanation of how the procedures and recommendations in the report were derived: "This report is a compromise of the ideas of various and diverse faculty members ... being a committee of people from the faculty we did want to evaluate some of ideas, so the report is a reflection of this. We did not want a highly theoretical survey, but an activity report based on actual results.

Relations Important

Wright emphasized the particular importance of faculty-student relations on the project, saying, "This is still exploratory work, not yet in operational procedure. It is the sort of project that needs co-operation between students and faculty to get something done.

"What we essentially said (in the report) is that if we had a carefully mechanized system to reflect training received by the students, results would not be sent directly to the administration, but be handled on a department level Since the department head deals directly with the faculty on a more personal level, this should be in his hands.

Copies on the committee's reports, basic and supplementary, are being sent to the University Senate today.

Because of the great expenses involved in such a project. would be impossible for the University to undergo evaluations of all departments at appropriate intervals without sponsorship of some sort.

The original committee is now dismissed at its own request, the members having telt their phase of the project was completed.

As one member of the committee remarked, "We regard ourselves as having accomplished the groundwork for further activity supported by some outside organization, perhaps something such as the Ford Foundation."

The USG-sponsored project now has the backing of every major campus organization. However, Hammel has expressed his disappointment with the "apathy of the student body" in signing petitions available in each living area and the Hetzel Union Building desk "This is the only program on campus." he said, "that has no monetary obligation, is

Faculty - Student Relationship Survey

Fifth Installment of SAR Report Compiled

For Recognition

By JUNE FIEL

The fifth and final installment of the Student Affairs Research survey report for this term has been compiled by Miss Prem S. Dua, consultant to SAR who was in charge of the project.

This installment deals with the relationship of faculty and students in an expanding academic environment. According to Miss Dua, the obligation of a university to push back the frontiers of knowledge presents to both faculty and students alike the challenge to inquire and to examine critically many of the assumptions, customs and beliefs that often have become traditions of Academe.

"While the responsibility for decisions in any basic academic policies requires a vast array of scholarly infor-mation, long years of experience and a maturity of judge-ment which even the brightest of students are not expected to have, yet, in recent years, faculties on most cam-puses have been eager to open up to students channels of communication that permit the interplay of free inquiry

from students," she pointed out. Concern For Quality The SAR survey that polled the opinions of University students in the areas of curriculum-making, faculty teaching, advising and research, etc., is predicated on the assumption that students at large have a wide-spread concern for the quality of the education they receive, the report states. The report also notes that through considered group

indement, students have a potential contribution to make to standards and goals of learning at this institution.

In recent years at the University, while increasing population and a vast expansion of knowledge have com-pelled a trend towards a bigger and more complex univer-

sity, students have been heard to lament the immense pressures of mass education.

Reaffirmation Asked

They ask that the university reaffirm the individual nature of the educational process as it is experienced by students and they insist that there is a wall between them and the faculty which must be broken down, the report continues

In this context, the 380 students who were polled were asked to comment on the accessibility of the faculty to students. Sixty-three per cent of them endorsed the idea that the faculty "is readily accessible and keeps regular office hours."

Asked as to the extent of personal assistance received by them from faculty in the general domain of educational and vocational planning, 56 per cent of the sample dis-counted the significance of any "valuable assistance" received in planning their education.

Valuable Assistance

Twenty per cent, however, acknowledged that they had been the recipients of valuable assistance from their faculty advisors "in planning their vocational and occupational future

With a view to gauging the extent of personal contact between students and their faculty advisors, the question was asked whether students perceived their faculty advisor as "knowing him well enough to be able to give to his prospective employers an accurate evaluation of him."

Only 21 per cent of the respondents felt hopeful about such an interpersonal relationship with their faculty advisors, the report notes.

With regard to the broad question of interpersonal relations between faculty and students, one general observation that emerges from a rather preliminary view of the data is the greater overall satisfaction regarding faculty accessibility and assistance expressed by the students sam-pled from the College of Agriculture.

Roughly 72 to 85 per cent of this sample had a favorable commentary. A greater overall dissatisfaction with the level of faculty accessibility was indicated by roughly 72 to 76 per cent of those sampled from the College of Business Administration.

The report states, however, that a much more detailed breakdown and analysis of results in terms of teacherstudent ratios in these colleges would be essential to point up any conclusive factors that may account for major differences of opinion.

Academic Interests

In part, the academic interests of today's students focus on exploration with faculty members, of the meaning of facts and ideas encountered by them in their education, both in and outside the classroom.

With respect to such a mutual exploration, 44 per cent of the pollces expressed a strong desire to share with the faculty "their personal, social and other non-academic in-terests," and only 16 per cent were rather indifferent in this matter.

In the context of a "community of scholars" in which traditionally faculty and students have lived intimately and shared generously, 68 per cent of the respondents take the attitude that "how members of the faculty conduct themselves in their private life is of no concern to the student body."

Miss Dua's report notes that this is indicative, perhaps, of the students' interest to communicate with faculty in areas that pertain only to his public academic not non-academic life.

In a period of youth that deplores the extent to which university professors and faculty are involved in research to the detriment of instruction, almost 60 per cent of those polled were willing to subscribe to the idea that "faculty is justified in devoting considerable time to research ac-tivity, book-writing projects and off-campus lectureship," according to the report.

This they perceive as essential to the faculty's contri-bution to the academic environment of the University. Asked to comment as to whether faculty show an interest in sharing and discussing their research and related ac-tivity with the students, 40 per cent indicated such an interest as forthcoming on the part of a majority of the Uni-versity professors who teach undergraduate classes. Better Teaching Among a generation of students calling for better teach-

ing, less emphasis on research and more attention to under-graduate education, the students polled took the following stands:

Ninety-two per cent of the student body polled were decidedly of the opinion that the University faculty should devote no less than half of their time to "teaching and instruction of undergraduates.

Seventy-five per cent of the student body agreed that a faculty member should contribute no more than a quar-ter of his time to research and almost unanimously they are of the opinion that a faculty member need devote no (Continued on page four)
