Navy Wrestlers Favored Easterns Open Today

By STEVE SOLOMON
Collegian Sports Writer

It wasn't meant to be one of those gibbering pep talks designed to instill a blood lust in his athletes. That would come later. Bill Koll just wanted to set a few things straight.

"I want you to go all out in each bout," the Lion wrestling coach said yesterday as his men took a break in their last workout before today's Eastern Intercollegiate Wrestling Association Tournament. "Don't save a thing. Wrestle each match like it was the last of your career and your life depended on it."

Koll was expounding the creed of tournament wrestling. Which is, in so many words, to wrestle like hell because there may be no tomorrow.

Koll's philosophy is not unique. Coaches of 16 colleges throughout the East are telling their men the same thing. And 160 wrestlers are listening.

Tournaments, because of the national attention focused upon them, are the real heart of the season. An individual or team championship goes a long way toward making amends for poor dual meet performances.

"We're about due for a hot spell," Koll said. "Our freshmen suddenly

broke out of it last week in the Plebe Tournament and took seven medals, so maybe that's a good sign. I'm looking forward to the varsity doing it this week. If we can get all the wheels meshing together, we're going to be tough."

Navy, however, will be the odds-on favorite to take its first team title in 22 years. The Middles plowed through a 9-0 season and have defending 145-pound Eastern champion Pete Vanderlofske and runners-up Gary Burger and John Kent ready and healthy.

Penn State and Army figure to be the only serious challengers by virtue of their close losses to Navy in the past three weeks. The Lions took Navy down to the last bout before losing, 17-14, in Rec Hall, and Army fell a week later, 19-13. Lehigh, winner of five of the last seven Eastern tournaments, figures to finish no better than fourth after a 6-5 season.

Penn, with a glittering 10-0 dual meet record, joins Navy as the only undefeated teams in the tourney. But the Red and Blue don't have enough overall depth to capture better than a fifth or sixth place for the upsurging Ivy League.

It's just this team depth which makes Navy the favorite. The Middles

appear capable of scoring points in each weight class, whereas Penn State and Army show definite weak spots.

Three Nittany Lions may enter the tournament as favorites in their respective weight classes. Wally Clark (7-1) at 130, who missed the last two meets of the season with a hamstring muscle pull, Vince Fitz (7-2-1) at 145, and Rich Lorenzo (9-0) at 191 are the Lion hopefuls to be wearing gold on their return to University Park.

Navy, meanwhile, has definite threats in Burger (9-0) at 123, Vanderlofske (7-1) at 137, Kent (7-1-1) at 160, and Mark Kane (5-1) at heavyweight.

It's likely that Army will need top performances from a talented trio of its own to stay in contention for the team title. Russ Baker (3-1-3) at 152, Jim Harter (7-0-2) at 177, and Paul Raglin (7-2-1) will carry the Cadets' hopes.

The rest of Penn State's lineup for this afternoon's opening round shows Bruce Balmat (sophomore, 4-4) at 123, Dave Spinda (senior, 3-2 season, 11-7-4 career) at 137, Bob Abraham (junior, 3-4, 11-11) or Tom Hostette (senior, 3-1, 9-7) at 152, Matt Kline (senior, 9-1, 26-8-1) at 167, Phil Lilley (sophomore, 0-1) at 177, and Larry Hockackers (sophomore, 3-6) at heavyweight.

Lions Head for IC4As

Penn State track coach John Lucas calls it the "most competitive and largest track and field meet in America," and tomorrow at the new Madison Square Garden, he and 16 members of the Lion squad will try to get their names in the IC4A record books.

"Everything has been electricity at Rec Hall," Lucas said before he left for New York City. "The workouts have been crisp and sharp, and quality performances have been exceptionally good." Obviously, keying themselves up for the IC4A championships has been no problem at all.

Over 160 colleges and 900 athletes east of the Mississippi will compete in the 12-hour extravaganza, but Lucas said the condition doesn't worry him. "We'll have our soft cushions and thermoses there, and we'll be ready for them," he added.

Ray Smith, a finalist in the mile run last year, and holder of the University's two-mile record (8:57), will run the latter race tomorrow. He'll be joined by another senior and finalist, team captain and All-American triple-jumper Chip Rockwell, who will be entered

in the running broad jump. Also returning as veterans in the championships are Bob Beam, 60-yard dash finalist, and Al Scheaffer, last year a quarter-finalist in the 1,000-yard run and this year entered in the mile.

The rest of the traveling squad is young and new to IC4A competition, but Lucas said he feels their anxiety for the meet could make up for inexperience. "It's the best representation I've had in the 6 years I've been here," he said.

Joining Beam in the 60-yard dash will be Charlie Hull. In the 60-yard high hurdles, Lucas feels he has "the two most talented hurdlers since Rod Perry, the school record holder 10 years ago." They are soph Ken Brinker and Chuck Harvey. The 1,000-yard run will be entered by junior Steve Gentry.

Lucas' field team will enter every event represented in the Garden. Along with Rockwell, John Cabietti, school record holder in the high jump, will be counted on to lead the contingent.

Though the two shot men aren't expected to break any meet records, they have been

praised by their coach as being two of the hardest-working individuals at State. Mike Reid, down to a trim 239 pounds, has been working all winter to regain his form and should come close to surpassing his own record.

State has never been represented in the 35-pound weight in the school's history, but tomorrow a sophomore, Roger Kauffman, will compete. The State College trackman has practiced in the cold, seven days a week ever since December. He's already acquired a school record in the event, although national honors are still in the distance.

Finally, Charlie Loschmann will compete in the pole vault, and a frosh foursome will face 10 of the East's best quartets in the invitational medley relay. They include Ralph Kissel, Tim Donovan, Gordon Page and Mike Schurko.

Women's Weekend Sports

The varsity bowling team gymnastics team will feature a will hold its final match at 1 p.m. tomorrow in Rec Hall special of the season with Towson against American University. State College at 2 p.m. tomorrow. The Penn State women's row in White Hall.

FREE! DO-EUROPE-YOURSELF-KIT

Do Europe on your own in a SAAB, the small car that does things other small cars shouldn't do. Buy it here. Pick it up there. Unusual savings. We handle all details.

FREE HOME DELIVERY FROM SWEDEN TO P.O.E. EAST COAST.

SAAB Motors, U.S.A.
100 Waterfront Street
New Haven, Conn. 06506

DO YOU WANT TO BE A MORE SUCCESSFUL STUDENT?

What was Christ Jesus's Success?
Was it His Life and His answers about God?
He gave to the searching thought His energy and spirituality.
Is the power that animated this great thinker dead?
No, the Christ is alive and operative now!
We can apply the laws taught by Christ Jesus and thus discover the fulfillment that is ours.

A century ago a woman challenged the material world by discovering that through reliance on God and His Christ man could be healed and his life heightened—Christ's works repeated.
She named her discovery Christian Science.

We invite you to come to a lecture on Christian Science.

Explore with us
the possibilities of becoming a better student by becoming a better thinker
The title of the lecture

HOW CAN YOU FIND TRUE SUCCESS?
by Herbert E. Reike
A member of the Christian Science Board of Lectureship

Public Service Electric and Gas Company New Jersey
EQUAL OPPORTUNITY EMPLOYER
One of America's Largest and Most Progressive Suppliers of Energy

On the waterfront at Annapolis—

growth opportunities for research engineers and scientists

The Naval Ship Research and Development Center, Annapolis Division conducts RDT&E in naval shipboard and submarine machinery and auxiliary systems (electrical, propulsion, control, etc.). In addition to developing basic improvements in performance and reliability, the Division concentrates on ship silencing, new concepts in energy conversion and control, ways to minimize friction and wear, special operating machinery for deep-diving vessels and tough, resistant naval alloys to meet all ocean environmental conditions.

The Annapolis Division buildings—now more than 50 of them—house some of the finest research, experimental and evaluation equipments of their kind, such as high-speed computers, electric power generators, vibration and shock test stands, metals composition analysis instruments, cryogenic storage and handling facilities, physics and chemistry labs, and complex instrumentation for measuring strain, stress, pressure, acceleration, velocity, performance, and reliability. The Division grounds resemble a modern industrial park, and include special facilities for in-field experimentation.

And the locale is ideal. Washington, Baltimore and the ocean resorts are no more than one hour's drive. Annapolis itself is the state capital, and offers small-city living with metropolitan accessibility.

Urgent new projects require additional engineering and scientific personnel with BS, MS, and PhD degrees.

Typical Duties of Engineers and Scientists

Mechanical Engineers—Research and development in shipboard propulsion machinery—pneumatic and hydraulic systems—friction and wear equipment and devices—machinery silencing—and many other naval and shipboard mechanical applications.

Electrical Engineers—Research and development in electrical power and its control—magnetic fields—ship control systems—instrumentation—electro-chemical processes—electro/electromechanical equipment silencing—plus a variety of additional naval and shipboard electrical applications.

Electronic Engineers—Research and development in electronics—servo-mechanisms—electromechanical devices—instrument and panel illumination—pressure measurement—fluid flow measurement.

Chemical Engineers—Research and development work in chemical and electro-chemical processes; gas and fluid flow systems and equipment; air and water treatment systems; semi-conductor materials; lubrication; fuel systems and processes; filtration; hydraulic fuel systems.

Physicists—Application of physical principles to the areas of sound, electronics, optics, mechanics, instrumentation, or electricity and magnetism.

Chemists—Engaged in application of chemical principles to the areas of water treatment and purification, corrosion and deposition in naval equipment, atmosphere purification, thermoelectric materials, fuel cell power generation, lubrication, fuels, hydraulic fluids, and instrumental analysis.

Mathematicians—Apply the techniques of mathematics to the solution of scientific and engineering problems in the support of research and development programs of the laboratory. Analyze physical problems and formulas suitable for numerical analysis and computation. Program for solution by digital computer when appropriate.

Metallurgists—Research and development work in the area of new or improved alloys for ship hull and machinery applications involving considerations of physical and mechanical properties of metals and alloys, fatigue and corrosion characteristics, and weldability.

Salaries range from \$6,681 to \$10,945 per year, depending on type of degree and scholastic standing.

Appointees acquire the benefits of career Civil Service and regular salary increases.

All applicants will be considered on the basis of merit without regard to sex, race, creed, color, national origin, age, physical handicap, marital status, or lawful political affiliation.

If you are interested in applying your capabilities to the vital and expanding business of improving ship and submarine performances, arrange with your College Placement Officer to see the Division's recruiting representative, who will be on campus for interviews on
