Contemporary Gifts Corp. of New York. It is a flowering perennial belonging to the spiderwort Pink spots appear on the blue or purple blos-

soms of the plant when a low level of radiation is present. The spots appear between 15-21 days after exposure. Ramie Arian, secretary-treasurer of the cor-

poration, explained the plant's reaction. "When exposed to radiation, the cells of random living things mutate unpredictably," he

predictably from blue to pink, he said.

Then, Arian said he read an article in Mother Jones magazine on the development of plants that biologically detect radiation. After unsuction, Arian said. It is possible to get a random mutation, he said, but there would be just a single spot, not a pattern, on the blossoms. Arian said that the plant is useful where ever a

possibility of a radiation leak exists. These plants are useful for people who are subject to any radiation leaks from microwave ovens to X-ray machines, he said. Researchers at Brookhaven are broadening the scope of the plant's detection to other dangers such as pollution and toxic wastes. Arian

> He said that Ichikawa's plants are grown primarily indoors. Contemporary Gift's plants survive both indoors and outdoors, he said. Contemporary Gifts is working to get a bright color contrast in the plants, Arian said, Brighter colors will make it easier to detect anything that is causing a mutation in the plants. Richard Craig, University associate professor of plant breeding, said he has never heard of the

Nuclear Plant, but it is possible for certain types

of plants to mutate because of radiation.
