BRIDGEPORT, Conn. - Cold rain and the discovery of buried hazardous materials hampered rescue workers in their search vesterday for 11 men missing in the ruins of a

collapsed apartment building. The body of Herbert Goeldner, 37. of South Hadley, Mass., was pulled from the rubble of the L'Ambiance Plaza project body shortly before 1 p.m., raising the official death toll to

Rescue workers burrowing into the mass of shattered concrete and mangled steel had said they found pockets with enough air circulating in them to sustain life, but hopes were as clouded as the skies.

"One void went down quite a way: We felt the condition was too dangerous to put anyone in there," said Jonathan Best, the city's director of emergency management. "We looked around with a camera. We haven't seen anything.'

Mayor Thomas Bucci had said that the search for possible survivors would continue until Saturday. Yesterday, however, he said officials won't set a deadline.

"There have been survivors in other catastrophes when all hope seemed to be gone and a survivor has been found. So we're grasping at that bit of hope, that there is some individual still down there who has survived

this catastrope." Bucci said. No one has been pulled alive from the wreckage since the concrete slabs fell from a height of six stories Thursday, trapping 28 men. Funerals for three victims were

held yesterday, and two more were planned for today. Dr. Wayne H. Carver, deputy state medical examiner, said autopsies have shown workers died from massive physical injuries or compression

of the chest so breathing is quickly "All the information that has been
