

THE FARMER'S WINTER SONG.

There is a time, the wise man saith, For all things to be done-To plough, to sow, to reap—as roll Successive seasons on :-

For pleasure too-in flow'ry spring. In fragrant summer's vales, In fruitful autumn's yellow fields: In winter's evening tales.

And though the fields are bloak and drear, The forest's verdure gone, And all is wither'd, cold and sere, In garden, field, and lawn;

There's something left and much to cheer, And charm the farmer's heart-For wintry winds to harvest hope, Great influence impart.

And while he views the drifting snow, And treads the frozen earth, He hath at home his garners full, And social blazing hearth! And thus he sings, whate'er pervades The earth or sky, at morn-

"Of wintry winds and summer's suns,

The farmer's hope is born.'

From the American Farmer. ON: THE DISEASE COMMONLY CALLED The Mollow Morn.

MR. SKINNER.—There is, perhaps, no disease in this climate from which our neat cattle have suffered so much, as that comcalled the Hollow Horn; and unfornately, few persons have thought it necesary to give any attention to it, or its cure, for we find but little said in any agricultural work relative to its treatment.

The name appears to me to be badly anplied, as the horn alone is not the seat of the disease; it pervades the whole system—and cattle without horns, are quite as subject to it as those with them-having often seen those without horns have it.

The hollowness of the horn proceeds from the violence of the fever throughout the system. I have known cattle feeding in stalls to be attacked with it, as well as those in poor condition; and no doubt those in poor plight are more liable to its attack, their system not being in a state to resist any disease; it occurs too at al! seasons of

the year, but more particularly in the spring. The animal attacked with it looks rough starts much in its coat, and falls off very fast in flesh, its food having but little effect in nourishing it. The eye looks very hollow and dead, and runs with a yellow matter which collects in the corners and around them. Many persons rely upon the feel of out of place, thigh and arms swollen and broke the horn, as the best indicative of the disthe horn, as the best indicative of the disease, but this I think very uncertain; in some cases it is at the foot, cold to feel while healed up, and he was restored to health, although in others very hot. A very small gimblet thought incurable. will, however, remove all doubts, and the low by eruptions and sores in various parts of his low citizens throughout the Commonwealth mark on the horn not visible after a few be found without pitch, and little or no blood and gradual decline of the whole system, so as to threaten an approaching Consumption. He was ease does not exist, you will find blood immediately upon entering the horn. The gimblet used for boring, should be well washed and greased after using; for if it is not and should be used to try the horn of an animal not actually affected with the disease, it will most generally give it to them. It is a disease that is highly inflammatory and infectious; and the animal having it, ought to be removed from the herd until well. The following mode of treatment 1 have found very successful, and the beast soon restored to a thriving state. As soon as I discover an animal affected with the hollow horn, I bleed it from the neck (in the same vein in which a horse is bled,) from two to six or seven quarts, according to its age, size, and condition, and give it from three quarters to one pound and a half of glauber salts; with a middle sized gimblet open the horns through and through, making the holes so that they may be perpendicular in the usual position the animal carries its head, so that the pus formed may have a free discharge as soon as the horns are opened; put through the hole into each about a table spoonful of strong vinegar, in which some sait and black pepper has been put. The day following, the horns must be again opened and cleansed from the pus, which generally is new formed, and about half a tea spoonful of spirits turpentine, put

also the salts. The food during the continuance of the disease is important—corn in every shape is bad-potatoes are of great use, (with a small quantity of Brewer's grains, if to be had, and the animal ought to have from one to one and a half peck daily, with hay in the winter and grass in the summer.

in each horn, and a little on the poll of the

disease. One bleeding is generally suffi-

cient, but I have known cases in which it

was necessary to repeat it three times, as

Potatoes have had a wonderful effect on the animal as soon as the bowls are well cleansed, the importance of which any person will be convinced of, who observes the discharge from the animal. In some obstinate cases I have given daily, from a half to one ounce of nitre sprinkled on the potatoes. It is important at the first bleeding, to take as much-blood as the animal will bear, as the fever is more easily checked by one large bleeding, than two small ones, and the animal better able to bear it.

In many cases the bleeding and salts have been sufficient without opening the horus; and when taken in the curly stage will gengrally be found to answer, but the boring cortainly assists in forming anew the internal part of the horn, and which he spon as it

commences forming, the holes in the horns should be allowed to close,

be sheltered from the inclemency of the weather, during its continuance. No age appears exempt from its attack; having seen it in a yearling as well as subsequent ages. I am induced to offer this mode of treatment to your subscribers, having never in any instance failed of restoring the animal; whereas before this mode of treatment was adopted I annually lost several. The fleam for bleeding cattle should be rather deeper than used for a horse, the vein in the neck, not laving so near the surface; the orifice is closed up with a pin, in the same way as in bleeding a horse.

ADVERTISEMENTS.

A VALUARTEE MEDICINE Recommended by unquestionable and

lic what experience has proved to be one of the most efficacious compounds in the Materia Medica, for the cure of that class of distressing, dangerous and inveterate Diseases produced by an impure state of the blood, acrimony of the hu mors and vitiated habit of body, and usually exhibiting themselves in the various forms of Scrofula, Salt Rheum, Leprosy, St. Anthony's Fire, Fever Sores, White Swellings, Foul and obstinate Ulcers, Sure Legs and Eyes, Scald Head, Scurvy, and Veneral Taint, where Mercury has

DR. RELFE'S

have, in a multitude of cases, cured these inveterate and deep-rooted complaints in their worst and most hopeless stages. The Drops are also given with success for violent eruptions after the measles, red blotches, Estering eruptions and pimples on the face; and in connection with Dr. Jenn's Liniment, they remove white swellings of the joints. The Scrofula, in its early shapes of mere tumors, behind the ears and under the chin, and swelling of the upper lip and nose, will not only quickly yield to this preparation, but scrofulous ulcers, which have spread to such an extent and depth, as to corrode the cartileges and affect the bones with caries have been gradually and permanently-healed, by the persevering administra tion of this powerful medicine; the sunken squalid countenance restored to its florid hue, the vital energy re-established, and the whole system purified and invigorated. They are also the best Spring and Autumnal Physic.

of Dr. Relfe's Drops, the Proprietor selects the

INTERESTING CASES.

IF A Lady, to whom reference can be made, was for years affifted with humors on her neck, accompanied with frequent itching oruptions, and running sores. She had tried various remedies and had taken the best medical advice, but could get no permanent relief, and her case daily becoming worse, fears were entertained of a fatal termination of her complaint, when a friend providentially recommended the Botanical Drops four bottles of which effected a complete cure, to the surprise and joy of herself and friends.

L' A Child of 8 years, had lost the use of his arms, one leg was almost crippled, hip dropped penetrated down to the bone. On taking these Drops he recovered the use of his limbs, the sores

body, especially his neck and hands; weakness days. If the disease exists, the horn will at the stomach, loss of appetite, general debility, entirely cured, and restored to a fine state of health by five or six bottles of these Drops.

IFA Married Lady was for years afflicted with eruptions on the face, head, ears and various parts of the body, attended with violent itching burning, &c., had tried many prescriptions with out effect; was confined to her room, and declined all company. She was cured by taking four bot tles of these Drops.

UTA Ladbelonging to Saugus, whose head was covered all over with sores and blotches, was wholly cured by a few bottles, after every other reme-

'A Correspondent writes thus: "I have had UI cers on my legs so bad that I expected to lose the use of thein, and could only walk on crutches; two pleces of bone came away from my right leg; when hearing of your Relfe's Botanical Drops, after trying every thing else that I thought would allay my sufferings, on using three bottles, I found myself nearly well; the ulcers began to heal up and cease

. A Gentleman writes, he had been sorely afflic ted for ten years with Biles all over his body, and having tried all kinds of remedies without success by the use of those Dropshe was perfectly cured Another Gentleman writes: "I have been seri ously afflicted with the Salt Rheum on my head &c. and resorted to the use of many medicine without effecting a cure, or doing any essentia good, until I obtained some of your Botanica Drops, which,on using a short time, entirely cured me. I therefore recommend it to every person

IF"I was afflicted," writes a person, "for siyears with infolerable burnings all over my body in each horn, and a little on the poll of the a dreadful ulcer on my left leg, and every other animal daily during the continuance of the day a roturn of headache. After taking one bottle I began to mend, and after the third, was perfect ly cured; sixty-two pieces of bone came from my leg, mostly very small, the largest was two inch
