Metal Tips to Boots and Shoes .- The saving in shoe leather which the small metalic tip on the toe of a boot or shoe effects is very great, and the invention is one of practical ntility. Children are remarkably fond of kicking out the toos their little shoes, thus rendering them useless and making another pairnecessary. By the use of these tips, which may be made of silver, copper, iron or any other mallcable metal, the boot or slice may be worn until it is really so long as any portion of the sole remains, the tip will be held fast. They do not increase the weight of the shoe above half an ounce or an ounce. It is theinvention of G. A. Mitchel of Turner. Mo., and was patented on the 5th of January. Economically speaking, there is no doubt of its value, as one pair of boots and shoes-men's, ladies' or children's-can be made to last nearly twice the time they would without the tips .-Scientific American.

ADVICE TO SOMES ME SAVE THE BOWA Fresh Air. Dr. Histo Journal of Health gives the following advice to

consumptives:

Eat all you can digest, and exercise great deal in the open air, to convert what you cat into pure, healthy blood. Do not be afraid of out-door air day or night. Do not be afraid of sudden changes of weather; let no change, hot or cold, keep you in doors. It it is going out, because you est as much upon a rainy day as upon a clear day; ought to be thrown off by exercise, and If it is cold out of doors do not muffle your eyes, nose and mouth in furs, veils. woollen comforters and the like; nature has supplied you with the best maffer, the best inhaling regulator—that is two lips; shut them before you step out of a warm room into the cold air, and keep them shut until you have walked a few rods briskly, and quickened the circulution a listle; walk fast enough to keep off a feeling of chilliness, and taking cold will be impossible. What are the facts of the case? Look at a railway conductor going out of the hot air into the piercing cold of winter, and in again, every five or ten minutes, and yet they you will scarcely find a consumptive person in a thousand of them.

It is wonderful how afraid consumptive people are of cold air, the very hing that would cure them-the only obstucie to cure being that they do not selves a whole winter in a room with a temperature not varying ten degrees in six months. All such people die, and vet we follow in their footsteps. If I were seriously ill of consumption I would live out of doors day and night,
