This celebrated Dull is superior to any other uchine of the kind yet introduced to the pubtlic. Among its advantages are these:—It dis-tributes the grain with perfect regularity. It never chokes or breaks the grain. Rough ground, or fast ar slow driving, will not vary the quantity sown to the acre. It can be regulated whilst in motion. The teeth or shovels are so constructed as not to break when coming in contact with roots and stones, but spring back to their proper places. It will sow every kind of grain with the came hopper. It also measures the quantity of grain to be sown to the acre, and is simple in its construction

tich ground. These machines need only be seen to be admired. All who have tried them pronounce them the most complete arrangement for the purpose ever offered to the public. Hundreds of certificates can be produced
