Work- mellow soil, kept moist by cultivation, or ing Farmer.

Transplanting Trees.

In taking up trees for transplanting, be partially, but not wholly compensated by a diminution or entire removal of the top; but there should always be root enough to supply the wants of the body, (which, if large, requires more nourishment to sustain it.) A deficiency of top, weak point made strong. Failing pasture however, is less fatal, especially in the tempts stock to break in and destroy. Care early part of the season, than a deficiency in this regard now, may save you from bea tempted to their ruin, by seenes, has is ever the delusion of the erring. They i , and amusements, which, at the first, feel that they are descending, they know successful, and profitable to the projectors, the affections" of the "Dons." Taxes many temptations to do wrong, how many ter, the tree will readily make enough of seemed perfectly harmless, and every way that they are wrong, they know successful, and promanie to the projectors, and every way that they are wrong, they kope to pursue that a great many "would like to" specuunexceptionable! How many have thus a better course—nay, they resolve to do lators have laid out Cities in various parts can gamblers, (who won't play a "fair the peace of your friends, would you escape, but if there be a deficiency of root, altho' been won to extravagance, dissipation, in- so. But the reveren again comes. The of the country, on mining streams and the game") into their purses and it rules of caton account of innate, vital energies, yet it fited by it.

will very probably me before the close of

son will not always decide; for if that shall be peculiarly favorable, a small rost may sustain a tree through it; but the con equence of a small root may be a corresponding small top, and of both, a dead strip running the whole length of the tree as desponding, your own sanguine spirit occupying, perhaps, one-third or one-half catches the infection; but if she is full of of its whole circumference. Some trees hope and energy, her smiles will theer have a much greater tenacity of life than our happiness, 'epends chiefly en our wives. smaller root, or even with none at all But tlers" as they are called, I lking about flourishing State in the Union, in a few L t a man marry one, therefore, "equal to with these exceptions there should always either fortune," who can adorn his riches be a direct proportion between the size of or brighten his poverty; and who under a tree and its root, and an inverse proporall circum tinces, will be truly his he'p- tion between the root and the tenseity of life: i. e., the less the tenacity of life the

> The above is from the Rural New Yorand saves much labor in after cultivation. come changed to surface soil, while the richer earth placed in the hole will supply food for the tree for many years, insuring healthy and rapid growth. Good soil is thus placed at the ends of the roots to feed the tree, while the sub-soil will sustain the trunk in its upright position. We should not forget when transplanting a tree, that we desire it to become large, and therefore should dig large holes in anticipation of growing roots. The loose soil filling a large hole, always improves by acting as a receptacle for the moisture and gases received from the atmosphere, not only on would not be improved by similar treat-

rious kinds from Chine. Three fourths of no dodging 'ear. One may protect his bed while met. The action of the play is cod to draw the conclusion, that next to all the increhandles consumed here, is house against burglars, his purse against to compact them in lumps, and thus rends memore, the great prime mover in successre ived it in the Culture, England, mckpockets, his ship against fire or the futhe art remarks at the log of their volve of the rest to leddings, and the lamber draws are very start in land in the same and the lamber draws are very start in land in the same and the lamber draws are very start in land in the same and the lamber draws are very start in land in the same and the lamber draws are very lamber draws are not yet planted, should be run then irrigation.
