PUTTING OUT VESUVIUS !-- One Mr. M'Laughlin, recently returned from abroad, states that there is a project on foot at Naples to extinguish the fires of Vesuvius. It is understood that the bottom of the main or grand caater, is several thousand feet below the level of the sea. The plan, therefore, is to dig a large trench or canal from the sea to the crater, the expense of which will not exceed two millions of dollars, and thus extinguish the fires that have been burning for thousands of years. It is said that the fine lands thus to be reclaimed, will more than ten times pay the expense of executing the grand design.

De There's a chance for contractors. And how much premium would be given for the front seat at a view of the operation of the crater when forced into the service of the sea as a steam-boiler !

Pepsin is the chief element or great digest-ing principle of the gastric juice. It is found in great abundance in the solid parts of the human stomach after death, and sometimes causes the stomach to digest or eat itself up. It is also found in the stomach of animals, as the ox, calf, &c. It is the material used by farmers in making cheese styled Rennet, the effect of which has long been the special wonder of the dairy. Curdling of mila is the first process of digestion. A call's stomach can curdle nearly one thousand times its own weight of milk. Baron Liebig states, "one part of Pepsin dissolved in sixty thousand parts of water, digests meat and other food." Diseased

stomachs produce no good Gastrie Juice, Rennet or Pep-in. To show that this want may be perfectly supplied, we quote the subjoined
