THE MAY QUEEN.

Among the customs of our ancestors, honored "more in the breach than in the observance", is that of "Crowning the May Queen." It was my pleasure some time since, to witness a miniature representation of this ancient fastival. The convention was beau tifully incorporated into the exercises of a Sunday School celebration, while on an excursion into the country. The candidate for royal honors was one of the lovellest even tures out of an angel band. She was stationed on an emhere every eye could see her, and the entire cou pany were spread out before her in the form of an obles On either side of her were the Garlander an Bearer, while her maids of honor stand about h if to guard the sacred person of their Queen. As the notes of sweet music were dving away in the Garlander stopped forth, and hung around the neck of the lovely fairy a richly prepared Garland, with these

When the little beauty had been thus invested with t signia of royal power, she smiled sweetly on her happy subjects, and responded, as follows; QUEEN'S ADDRESS.

This diadem fair with pleasure I wear, Rejoicing in subjects so dear ; The sceptre I sway as Queen of the May, Will never engender a fear. My love will o'erwhelm the whole of my realm And smilles will attend on my laws; And all on the green will fock to their Qu

# Noxious Insects.

MR. EDITOR :- It is a well known fact that thirty years ago, our apples were, as a general thing, more sound and perfect than now-our peach trees suffered less from destructive insects-the ravages of the curculio were scarcely worth mentioning. while many of the injuries now inflicted upon our fruit and forest trees were almost unknown to the farmer. It is an equally well established fact that thirty years ago, thousands of insectivorous birds were to be found on our farms, where scarcely a single one is now to seen. Erery tree and bush was alive with their presence and the whole country made vocal with their delightful warblings. Now, compare these two facts, and what is the legitimate inference to be drawn from them.

Why, that the increase of noxious insects has been in an exact ratio with the decrease of the birds. Is not this subject worthy the attention of the farmers, and should they not combine their efforts for the purpose of preventing the destruction of these useful and harmless little birds, by lasy
