George Zammerman, of Sunbury, has invented and made a pair of shears for trimming fruit and other trees, that will prive eminently useful. One of the arms or the shears is screwed into a socket, faste and to a pole of any desired length. The sh are are kept open by a spring, and are closed by means of a lever, with a s will roller or pulier on the end, pressing on the other arm of the shears. A cord is mached to the lever running along the pile, by which the shears are worked. It is a handsome piece of workmanship, and operates admirably, cutting off a twig as thick as a finger without difficulty.

MACKATORICS
