## Potatoes.

feetually rotted or decomposed preparatory merly nothing. Of course, all other well be too much washed by the rain, which have failed in raising fruit. would deprive them of their fertilizing properties; and, in this way they would probably be more injured than benefitted from the influence of the atmosphere. Hence it is evident that the treatment and management of land preparatory to planting, is of much greater consequence towards obtaining a productive crop, than is generally supposed, and that there are but few soils, however defective in their powers of promoting vegetation, that can not by some application be made fertile or 59. productive.

There is no crop to which this observation applies so well, as to the cultivation of potatoes, as every extra expense incurred in producing them is re-paid, often ten-fold. by the produce, and in that of the succeeding crops ; whereas, by mistaken economy lost, at least there is little probability of \$15; poplar plank, \$20, do. scantling, \$16; their proving productive. With respect to \$11. rich and deep soils, they seldom require any other aid than good cultivation and a reasonable share of manure at the time of planting.

The management and choice of seeds is a matter of great importance. In the case of ordinary farmers, upon this alone the was lost on the island of Margaritta, off success or failure of a crop often depends, the coast of California, 167 miles from and, in fact, the neglect of this is the the point known as Cape St. Lucas, and principal cause of the quality of potatoes nearly 150 lives lost, including Edwin C.
