The calamities that every City. Town, Village and Country falls victim to annually, thro' the gross negligence of its inhabitants, is beyond calculation, especially when the remedy is so easy to obtain—this is found in ARMITAGE'S

Datent Magnetic Lightning Rods, and in this alone. This Rod has been examined by the most scientific gentlemen in the world-Professors M'Murtrie, Johnson, Wallor and many others that have examined them, recommend and speak of them in the highest terms of approbation. and have pronounced them the only safe rods in use in this or any other country for the protection of Lives and Property. One advantage is to divid and throwback a part of the electric fluid harmless to the clouds; in time of a stroke this enables the rod to conduct that portion of fluid that belongs to the earth without the slightest danger of learing the conductor. This red has many other advantages over the old one. The only place of manufacturing is in

RECOMMENDATIONS.

PRILADA, Aug. 12, 1847.

I have this day carefully impected a conductor or Lightning Rod, with vane and index, exected by Mr. Thomas Armitage, on Bellevus House, Gloucester, and have no hesitation in saying that it is not only the best I have ever seen, but that it is the only one I have yet examined that is constructed on strictly scientific principles. It is with much pleasure that I recommend his conductor to the attention of owners of buildings.

B. McMURTRIE.

I am well satisfied that the Magnetic Lightning Red, manufactured by Mr. Themas Armitage, of Philadelphia, is the best that has ever been made. I have seen the satisfied in the test that has ever been made. I have seen several years in the study of the laws of electricity and magnetism, and have no hesitation in saying that these liods are constructed upon the only principle of safety. The electric shock is reserved and dispersed by the magnet at the top of the rod, and it would be impossible, according to the laws of attraction and repulsion, for a building to be injured by a stroke of lightning when protected by one of these rods. I have been acquainted with Mr. Armitage for several years, and before he commenced the manufacture of these rods I examined the principle on which they are constructed, and felt convinced that their adoption would be attended with complete success. The increasing demand for these rods, and the extensive-sales in all parts of the country, is ample commendation of their utility and superiority.
