It is an well satisfied that the Magnetic Lightning from manufactured by Mr. The mas Armitige of Philadephis is the best that he care been made. That open several years in the study of the law of clotter ity and magnetism, and have no be sitution in as in, that these Rods arconstruction upon the only principle of safety. The electric plock is received and dispersed by the magnet at the top of the rod, and it would be impressible according to the laws of attraction and reputies for a building to be injured by a strike of lightning when protected by one of these rods. I have been acquaint of with Mr. Armiting for several years, and before be commenced the manufacture of these rods. I cas mined the principle on which the size constructed, and folic convinced that their adoptify would be attended with complete success. The increasify demand for these rods and the eat nextwostes in all parts of the country, is ample commensation of their utility and superiority.
