These Machines have now been before the Farmers of Michigan nearly two years, and have been tested by more than two hundred Farmers; all of whom are willing to give strong sertificates is their favor.

This improvement in Seed Sowing consists in the use of a cord or small rope in combination with tubes or bridges, which so protect the cord from the weight of the seed that it works without friction and with much case, causing no grinding, and the need is discharged without receiving any lujury.

There is no danger of clogging, as is the case with other Seed Sowers, and they can be guaged so as to sow any desired quantity. Wind does not affect the even distribution of the need; and, in case of rain, the need is well protected in the oox by the cover.
