ERIR COUNTY, PA , 38 : This day before me, a Justice of the Peace in and for the County aforesaid, personally appeared David McAllaster, Trea-

surer of the Erie Canal Company, and made oath in due form of law, that the annexed and foregoing Statement is just and true, to the best of his knowledge and belief.

Sworn and subscribed before me, this 10th day of Jan'y, A.

D. 1860.

JOHN SWENEY, Justice Peace.

Superintendent's Annual Report. To the President and Directors of the Eric Canal Company.

GENTLEMEN: Your Canal was opened by the late Superinten dent about the 15th of April, and delivered over to me, on his resignation, on the first of May, in as good condition as the decayed nature of the works would admit. It was closed about the 8th of December, there having been seven and two-thirds months of successful navigation; during which time there was no interruption of navigation except that caused by some small breaks, and the detention consequent upon the lowness of water on the Summit during the month of August.

The season has been a highly successful one for the Company, the tolls having exceeded those of any former year. The business of the Canal is steadily increasing, and there is every prospect of its continuing to do so if the Canal is kept in proper repair. To do this, however, will require very heavy expenditures for the next three years. A large proportion of the structures on the Canal are of timber, and, having been in use for a number of years, are very much decayed and require re-building. Much of the Canal is too narrow for loaded boats to pass each other, and requires widening and bottoming. The towing path in many places needs raising, and other works are required which are more particularly stated under the heads of the several divisions. When all these works are completed and the Canal placed in first rate order, it can be kept in re-

*Since this Statement was prepared, information has been received, that the suit of Peurose vs. the Eris Caual Co., pending in the Supreme Court, has been decided against the Company.

Seventeenth Appual Report of the pair for a very moderate expenditure until the work again re-

The expenditures on the fire of your Canal, from the 1st of May to the 31st of December, 1859, were as follows, viz:

Amount paid for repairing Breaks, \$1,557 55

re-building Dams, Spills, Farm Bridges, &c., &c.,
Am't paid for materials delivered for re-building Looks, Lock Gates, Waste Weirs, &c., &c., during

Am't paid for ordinary expenses, including dredging of Beaver Division, Shenango Line, and pay of Foremen. Lock Tenders. &c. 14,443 24 Am't paid for construction and equipment of new

Dredge, including expenses of same during the 2,723 86

Total. CONNEAUT LINE.-This is the most expensive division on the Canal to keep in repair, having two large Aqueducts, and more than twice as many locks and farm bridges, in proportion to length, as any other portion of the line, and from having been originally constructed in a less substantial manner than the other divisions. It has seventy-one Locks, only two of which are cut stone, and the balance composite Locks. The stone Locks require no repairs, and are not likely to require anything but new gates for a number of years. Of the composite Locks, six have been re-built, and the remaining sixty-three are very much decayed and must all be re-built within the next three years. Material has been prepared and arrangements made for re-building eleven this winter. Twenty-six must be re-built next winter, and twenty-six the following winter. Eighty-one of the Lock Gates are nearly worn out, and will soon require re-building. Twenty-two will be put in the present senson, and the balance must be renewed in the two following years. Forty-six spills around locks have decayed and require re-build-The most dangerous ones should be renewed next summer and the others in the following summer. Three large waste weirs and three smaller ones require re-building. For two of the large ones, those at Conneautville and Albion, materials have been prepared; and they will be re-built during the present winter. The others can be made to last another year. The large Aqueduct over Walnut Creek is badly decayed, but can be repaired and made safe for another summer. Timber and lumber for re-building it are being prepared this winter. The Aqueduct will be re-built during the coming summer, and will be ready for use on the opening of navigation in the apring of 18-1. Much of the tow-path on this Division is too low. Portions of the Four and Eleven-mile levels are in an unsafe condition, and require immediate attention. Some four miles in all should be raised from one to two feet. This division, like all the others, is in many places too narrow for loaded boats to pass each other. When boats were loading but one way no difficulty was experienced. But since the Lake Superior from ore has come into general use by the furnaces of the Shenango Valley, and boats are loading both ways, much difficulty and detention have occurred. About one mile of cribbing is required for protection of short levels and other placces; but most of this can be dispensed with until the more important works are completed, as it does not affect the safety of he Canal; its object being to reduce the expense of keeping up the tow-path. Six Farm Bridges require re-building.

The extraordinary expenses on this Division for this season, in re-building Walnut Creek Aqueduct, the Locks, Gates, Waste Weirs, &c., and for preparing the material for the work, which must be re-built next winter, is as follows-. 315,500 00

Spills, &c., in present season, ... For material for re-building Locks, Lock Gates,

Total, \$32,500 00 Summit.-Notwithstanding the extreme dryness of the past summer, a very good stage of water has been maintained on this level, and no difficulty experienced in passing boats, except in the month of August, when considerable detention occurred. But this was as much the result of overloading boats as of lowness of water. During the summer great difficulty was experienced in getting water down from the Lake, to fill the Level after locking down a number of boats, owing to the shoalness of the channel and the obstruction of the grass. This portion of the Canal will be dredged out early in the coming summer, and this difficulty permanently overcome. This Level, which was never taken out to the required depth, in consequence of meeting quicksand, has always been a source of expense and approvance to the Company and to boatmen. After a careful examination and tests with the small dredge, I became convinced that the quick-and could be taken out "with a dredge of suitable dimensions," for \$10,000, and so re-ported to your Board. The dredge was ordered and constructed last fall, but was got in operation too late to do more than test her working, which was highly favorable. I was in hopes this winter would prove an open one, in which event I expected to have done a large amount of the dredging on this level before the opening of navigation. In this I have been disappointed, and have been compelled to lay up the dredge. We will probably be able to use her for two months before the pening of navigation, and to fully complete the dredging by the spring of 1801. Should I fail in taking out the quicksand (of which I have no fears,) the construction of the dredge will still be an excellent investment, as she will save twice her cost in dredging the Feeder-a work that is more necessary than that of reducing the Summit, and one that, if thoroughly done,

would, in a great measure, obviate the necessity for the former.

Francy Creek Ferder.—This, the most important portion of your line, (as from it the water is derived to keep up the Canal,) requires extensive improvements; it being, in its present state, impossible to pass sufficient water to keep up the Summit during the summer. From the Lake to French Creek Aqueduct the Canal is full of grass, and no amount of cutting will keep it out so as to give a free passage to the water. The only remedy is to dredge it; and I propose, when the dredging of the Summit Level is suspended by the opening of navigation, to place the dredge upon the Feeder and dredge it to the depth of seven feet, from the Lake to French Creek Aqueduct This, with a thorough cleaning out of the Canal from the Aque-duct to Bemus Dam, will, I think, place the Feeder in a condition to pass sufficient water to feed the Canal at all seasons of the year.

The sheeting at the foot of Bemus Dum had entirely washed away. About half of it was repaired in 1858, and the balance has been completed the past summer. The Dam is now in good condition, with the exception of a few spar timbers, that have decayed, and the sheeting on the comb of the Dam, which should be renewed next summer. Portions of the chute at this Dam are badly decayed, having been built of hemlock tim ber. It must be thoroughly overhauled within a year or two. Several spills and waste weirs have decayed and been filled up. Some of them can be dispensed with: but it will be necessary to re-build two this winter. The banks of the Canal are in many places too low, and require raising. But if the Board determine to dredge and bottom the Canal, this can be done with material taken from the Canal, without extra expense. Considerable rip-rapping has been done at Conneaut Lake the past summer, and more is required. It will be necessary to

spend four hundred dollars on this work next summer to prevent further damage to the banks. The extraordinary expenses the present season for dredging

the Summit and Feeder and other works, will be as follows For dredging Summit and Feeder, \$4,000 00 bottoming Canal. 1.000 00

" bottoming Canal, " new work on dams, waste weirs and bridges. . .

SHENANGO LINE .- This Division consists of nine miles of slack water and fifty-one miles of canal, on which are five dams and forty-four locks. The upper sheeting of these dams has been broken by large trees lodging on them, and require re-planking. They also require some new sheeting timbers on the lower face, and the crib work above dam No. 1 and at the head of the pool of dam No. 2 should be re-built. These repairs will place the dams in condition to last ten years without any extra repairs. Of the locks, thirty-seven are cut stone and seven emposite. None of the stone locks require any repairs this winter, except locks Nos. 6 and 15. The latter requires new miter sills, and the former, which was built on quick sand, and has heretofore given considerable trouble, is reported to be partially undermined at the lower end. It will be examined this winter and put in thorough repair. Nix of the composite locks will last another year with slight repairs, but will require to be re-built next winter. The remaining lock is partially undermined, and must be thoroughly overhauled and re-built this winter. The lock gates on this Division are good, and, with the exception of a few balance beams, will require no extra repairs for several years. Many of the spills around locks have rotted out. It is important that they should be kept in repair; and it will be necessary to re-build ten next summer, and also four farm and two tow-path bridges. On the lower end of this Division, two weirs are out of repair and closed up. They should be repaired and opened. It is also necessary to re-build two waste weirs and two spills this season. The tow path in many places is very low, and needs raising from one to two feet for a concept of twalve wiles.

length of twelve miles.

This work, and the re-building and repairing of waste weirs. is highly necessary; as this Division, from its location, is subject to sudden floods of water, and, from the insufficiency of the waste weirs and lowness of the tow path, is in constant danger of breaks. The Canal on this Division needs bottoming out and widening for a length of six miles, it being of insufficient width for loaded boats to pass each other. The crib bing along the tow path in the town of tireenville is very much decayed, but with some repairs can be made to last this year, It will be necessary to re-build it next year. The tow path around Hartstown Reservoir has been gradually washing away for several years, and should be protected with stone or timher. Rip-rapping would be the most effectual, and it can be

completely protected with this for a sum not exceeding \$1,000. The extraordinary expenses required on this Division this season, to put it in complete order, are as follows-For dams, waste weirs, spills, bridges, &c., \$5,000 00 raising tow path, 3,000 00 bottoming and widening Canal, 3,500 00

Total, \$12,500 00 BEAVER Division. - This Division consists of twenty-three miles of slack water and seven and three-fourths miles of canal, on which are eighteen locks and seven dams. All the locks except that at Hardscrabble are cut stone, and none of

them are likely to require any extensive repairs, except that at Cannoquinessing. This lock, originally built too narrow, has been crowded in by the presence of the earth behind the walls, and is troublesome for boats to pass, especially in high water.
If it remains in its present state I would not recommend the Company to re-build but should it crowd in any more it will be necessary to do so, and will involve a Daily, at large expenditure. Six pairs of new gates are required on this Division. Two pair will be put in this winter and the balance

next summer.

The dams on this Division have been built a long time and are in a decayed and dangerous condition. At the time I took charge of the Canal there was a break in the Bridgewater dam: and during the summer 170 feet of it was thoroughly re-built at an expense of \$1,475 00. All the timber in these dams below water, and the stone filling, which are the heaviest portions, can be saved by immediately rebuilding the decayed parts. But if neglected until they break, the whole will be washed away and the expense of removing quadrupled. I am of the opinion that these dams can be re-built and made as good as new for a sum not exceeding \$12,000. If totally washed away, they cannot be replaced for \$40,000. In the event of their oss the Company would lose a season's tolls on the Division, amounting to some \$20,000, and \$30,000 on the cost of re-building, making a total loss of \$50,000. In view of these facts, I cannot too strongly urge the expediency of re-building the dams with the least possible delay. would probably be impracticable to re-build them all this season: but the New Castle, annoquinessing, and the balance of the Bridgewater dam, might be completed next summer, and the others in the following summer. Material has been contracted for re-building Cannoquinessing dam next summer, and the same should be done in regard to the New Castle and Bridgewater dams. Should the present winter prove as severe as present appearances seem to indicate, and break up suddenly in the spring, there will be serious danger of losing a portion of the dams on this Division; and the event is so probable in their present state, that I would recommend the Company to keep a fund of not less than \$20,000 in the Treasury to meet a contingency of this kind. One of the Aqueducts below New Castle has broken twice the past summer, and both were in such an unsafe condition that I had material delivered during the fall for re-building them. The contracts have been let and they will be completed by the first of March, and will cost about \$1200. About three miles of Canal on this Division require bottoming out and some portions of the tow path, especially below the Junction, require raising. Several Farm Bridges and Spills around lock- will soon have to be

The extraordinary expenditures requir ed on this Division this season are as fol-

For Re-building Cannoquinessing, New Castle and Bridge-

Total, \$9,700 00

The foregoing statements show a very large amount of works necessary to be completed this season: but they are all in my opinion indispensable to the successful working of the Canal, and have been estimated as low as think it possible to construct them. The works on the Aqueducts, Locks, Dams, Weirs, for most he done if the Canal is to be kent in works on the Aqueducts. Locks, Danns, Weffs. &c., must be done if the Canal is to be kept in operation, and the only reduction that can be made in the proposed expenditure is that for raising the tow path and bottoming out and widening the Canal. To dispense with the former may result in breaks that will cost more than the amount required to raise the tow path. But the only effect of the latter on the Company would be a reduction of tolls from incapacity of boats to carry as large loads as they raising the tow path and bottoming out and widening the Canal. To dispense with the fority of boats to carry as large loads as they pleasure or proff Yours true.

J. K. BRAIN. the extraordinary expenses for the season will be \$50,000. Ifthese works are proceeded with the probable expenditures from the 1st of January, 1860 to the 1st of May, 1861-by which time the Company will be in receipt of sufficient

To meet this expenditure the Company will have cash in the Treasury unappropriated, \$17,693.7. Probable Receipts for 1860, OS, ORBITAL

Total.

\$115,693,78 It thus appears that after making a most iberal estimate of the receipts for 1860, there necessary repairs and paying expenses to May 1st, 1861; or if the raising of the tow path and bottoming is dispensed with, of \$1,431 22,-If any serious damage is done to the Canal or Beaver Division Dams this winter, or if navigation is interrupted from breaks or other causes next summer and the receipts are reduced to \$70,000, "as in 1858," the Company will be \$29,000 short of sufficient funds to make the necessary repairs on Locks, Dames, &c. and to pay their ordinary expenses to May 1st, 1861. The expenses of the Canal have been reduced as much as possible the past summer. All payments for materials or labor have been made monthly in cash, and every effort made to economize in the expenditures; in which I have been ably seconded by the several foremen in charge, all of whom are experienced, competent, and attentive to the interests of the Canal.

BARR & KELSEY

BARR & KELSEY

HOSTETTER'S STOMACH BITTERS.

It is a fact that, at some period, every member of the human family is subject to disease or disturbance of the bodily functions; but, with the aid of a good tonicate the safer as good tonicate the exercise of plain common sense, they may be able at to regulate the system as to scentre permanent health. In order to accomplish this desired object, the time course to pursues is certainly that which will produce a natural state of things at the least hazard of vital strength and life. For this purpose, br. Hostetter has introduced to this country a preparation bearing his mane, which as a new medicine, but one that has been tried for year giving satisfaction to all who have used it. The fitter operate powerfully on the Stomach, Bowels and I ver, restoring them to a healthy, and vigorous action, and thus by the sample process of strengthening nature, enable the system to triumph over disease.

For the cure of Dyspepsia, indigretion, Nansea, Plais lency, Loss of Appetite, or any Billious Complainta, as any from a morbid inaction of the Stomach or Bosea, producing Crampa, Dysintery, Colic, Cholera Morbus, & these Bitters have no equal.

Diarrhoes, Dynastery or Flux, so generally contract er, and the cause of which may always be attributed, derangements of the digesture organs, can be corried, out fail by using HONTETTER'S STOMACH BITTER as per directions on the bottle. For this disease emply acting will recommend Bitters of some kind is why no - use an article known to be infallible? All nationshave their Bitters, as a preventative of disease, aftern githener of the system in general; and among teal all there is not to be found a more healthy people; the termans, from whom this preparation enamate; a sed upon accentific experiments which have tense-prove the value of this great preparation in the walmedical science.
