This improvement in Seed Sowing consults in the use of a cord or small rope in combination with tabes or bridges, which so protect the cord from the weight of the seed that it works without frection and with much case, causing no grinding, and the seed is discharged without receiving any injury.

There is no danger of clogging, as is the case with other Seed Sowers, and they can be guaged so as to sow any desired quantity. Wind does not affect the even distribution of the seed, and, in case of rain; the seed is well protected in the not by the covers.

Reference can be made to nearly two hundred Farmers, but a swrit select only a few of the best and most reliable who have used them: F.W. Fairman, Homer Johnson, Rufins Justice, John Allen, W.
