1860 M'CORMICK'S REAPER AND MOWE

20,000 SOLD IN THE LAST 5 YEARS.

OR AN AVERAGE OF 4,000 A YEAR. Being a Larger Number than is Manufactured by any other Single Establish-ment in the World.

Have now in process of Manufacture, 4,000 Machines, but am prepared to make such additions thereto as the times as a circumstances may demand. The Machine for 1800 will be found, I doubt not, so greatly improved, as fally to meet the wants of farmers, both as a Respect, said as a mover,—so modified in its construction, as now-to be the entry complete machine for both purposes. While entiting a swath seven inches wider than those of most makers, with a light drangle for less horses, in resping or mowing,—lighter than is required by such surveyer mechanes.

By the further perfection of the belancing of this machine, in connection with my patented semi-jointed tongue (with the wheel frame), the cutting apparatus is now co-mpletely and easily thrown over obstructions while in motion, simply by the weight of the driver in his place, thus dispensing with all levers, and complicated arrangements to effect the same object. A Castor Wheel, upon an entirely new principle has been added to the grain indee of the machine, wholly relieving the burses from oreasors in turning, and lessening side draught; also a ever shipper conseniently adjusted for throwing out, and nearly the three forms of the machine enables he raker to perform his work with much greater ease. I will refer to my circular for further information as to latents, Testimonics, &c.

In addition, I would saw, as herefolore, that farmers the just quester is an attitude to the machine enables. Have now in process of Manufacture, In addition, I would sav, as heretofore, that farmers who tray desire it, are at liberty to work my Machine through the harrest, with any other, AND KEEP, AND PAY 10R, THE ONE PREFERRED Agents are

repplied with pamphiets, &c.

A. I. MATHEWS,

DR. T. F. FRANK, OCULIST,

WITH the expenditure of much labor has finally succeeded in bringing that treatment for diseased eyes, so much recommended by writers on orphthalinin medicine, which consists in the application of chemical funes and vapors, to a useful hearing in his profession.

Oculists have greatly neglected this only rational treatment for want of proper scientific aparatuses, and with the rist of their patients eyes, substituted the vulgar practice of introducing the crude drug directly to the eyes; either in the form of solid caustic, or irritating adversor or washes. The consequence is that more eyes are destroyed by the use of medicine than by disease.

Dr. Frank has overcome this obstacle by the invention of his Ophthalmic Volatilising apparatus, and has for a few years past proved by the greatnumber cured under his care, that his treatment is unparalleled.

The patient under it enjoys the full thenefit anticipated from the medicine, without being subject to the distress produced by foreign substances used as vehicles for drugs, or the impure ingredient generally continued with them. Fain and unfammation is at once subdued, even in cases of long standing, and not an instance is known where opacity of the pupil was produced by fir Frank's treatment, on the contrary, is spendily removed in already in progress. Granulations of the lids disappear after a short treatment of this kind, without the use of lana Gausticeleaving the eye in a perfectly normal condition, not at all producing that cromic weakness which an irritating treatment is always followed by.

Weak eyes of old people receive strength, and cases of confirmed Amouros a are curred by these applications several cases of that description being under. It Frank's treatment now, are rapidly recovering.

In operations for cataract and deformaties of the eyes, this treatment promises success, in consequence of preventing undue inflammation.

Patients from a distance will find this treatment convening the treatment promises success, in consequence of preventing undue in DEACH Street, above the Buffalo Road
