The dangerous condition of cur post office steps is a subject that should receive the imnitg machinery cannot find anything of mediate attention of the Government officials reinterest than the new Gordon Job Press at this point. The stones have worn away eintroduced into this office. It is the neat | considerably, and each winter they become and completest piece of mechanism we more unsafe, from the ice and snow which accumulates upon them. At least two thousand people, we judge, are obliged to frequent the tailding daily, and the wonder is that more serious accidents do not occur. A returned soldier remarked to us that he would feel more safety in marching up before a rebel battery than in attempting to enter our post ffice when the steps are covered with snow or ice. The best way to remedy the matter would be to build a flight of parrow wooden stairs, reaching from the two central pillars to the ground, with railings at the sides. If something of this sort were done, and the steps kept clear of snow, the present difficul ties would be obviated. The Collector and Post Master probably have no money to dis-
