to confess their mistakes upon this subject, ers who may have occasion to visit the East arise that will afford a temptation to start the this spring, we heartily commend the Erie Rail cav. as being the great broad guage route and one of, the most captivating thoroughfares in the country. The mountain scenery almost the entire length of this line is of the highest calities where reform appears to be hopeless. order of sublimity; while the beautiful valleys of the Susquehanns, Delaware and Ramano, present the finest landscapes that can charm the imagination. In short, the variety of scenery is great and beyond comparison. The appointments of the road are complete in most influential and widely circulated religious every essential particular, and the accommo dations for passengers are of a superior order. Tickets by this popular route can be obtained istence of a predominant partisan or political feeling, on the part of the preacher, is excitat all the principal offices in the West and Southwest.

WHERE THE WATER COMES FROM .- A discursion of considerable interest has been going on for a number of months past between several scientific men in the West as to the adverse influences in discharging what he reprobable source of the water in the Great gards as a sacred duty. But it would be well then The oninin has been entertained by many that they are fed by subterranean streams, but this view is expressly contradicted in a paper prepared by Professor Lapham, of Mitwaukie, and lately read before the
as political crises sink into utter insignifidicted in a paper prepared by Professor Lan-Chicago Academy of Science. He holds that the quantity of rain falling upon the lakes and the country drained into them will be found to be twice as much as is discharged at Nagara; and hence the wonder is what be omes of the excess, rather than how we shall account for a deficient supply.

Among the items in the appropriation bill assed by the last Legislature are the follow ng of a local nature:

surveying and determining the exact pos n of the stone that marks the line, on the re of Lake Erie, between the states of and lyavia and New York, and the e ection f a m re durable manument, further inland. e sum of two hundred dollars. (\$200,) or so For the Marine Hospital of Pennsylvania

### FOR THE HARVEST OF 1867

DODGE'S PATENT

AND

This machine has not with the most complete success. In every section where, it has been introduced, it has then precedence over those machines which have heretofore ranked as first class. We have endeavored to furn-

WITH DOUBLE DRIVING WHEELS, FLEXIBLE FINGER BAR, AND FOLDING

CUTTING APPARATUS.

BEST REAPER AND MOWER IN THE MARKET.

TWO DRIVING WHEELS.

This Machine has two driving wheels, which support the whole weight of the Frame, Gearing and Driver, giving it great power and facility of operation.

The fluger-bar of Bodge's Machine is attached to the frame by adouble hinge joint, which allows it to follow the surface of the ground, without being affected by the working of the trame—over ridges and through hollows, the independent action of the Cutter is perfect, enabling either end to rise or fall without affecting the other. CUTTING APPARATUS.

The most important part of a Mowing Mechine is its cutting apparatus. Of all the numerous experiments and inventions, the OFER, WRONGER FURS GUARD, faced with CASE STREE, as used in this Machine, is the only guard inventions, the OFER, WRONGER FURS The advantages claimed for the guarda are: They do not bend or break, that has proved successful in all places. The advantages claimed for the guarda are: They do not bend or break, they are all treelessly alik. They do not clog.

The draft of this Machine, in heavy grass or grain, is much lighter than ordinary plowing, and does not exceed an average of 100 pounds direct draft. A light sair of horses can work the machine easily all day, in any kind of grass or grain, when the machine is properly adjusted and operated. AS A SELF-RAKER.

AN A REAPER.

The double hings joint and two driving wheels make it the ONLY REAPER PERFECTLY ADAPTED TO UNTRY ENGROUND. The over hanging Real is sup-orter apona real p at fixed firmly in the drag-bar secket, and EVEN GROUND. The over hanging Real is sup-orter apona real p at fixed firmly not in the drag-bar secket, and EVEN ground sequence of the way of the team on the next form. The grain is easily deligned at the rear of the machine, entirely out of the way of the team on the next form. The grain seasily deligned to any required height round, in good shaped bundles for binding. THE PLATFORE is readily adjusted to any required height round, in good shaped bundles for binding. THE PLATFORE is readily adjusted to any required height round, in good shaped bundles for binding. THE PLATFORE is readily adjusted to any required height round, in good shaped bundles for binding. THE PLATFORE is readily adjusted to any required height round, in good shaped bundles for binding to the machine, entirely out of the way of the team on the next round, in good shaped bundles for binding to the machine, entirely out of the way of the team on the next round, in good shaped bundles for binding to the machine, entirely out of the way of the team on the next round.

W. W. PIERCE & CO., 830 State Street, Eric, Pa.,

Georgia Agents for Eric and Crawford Counties.

Price \$25 per acre.

OHIO AND BUCKEYE COMBINED.

With this end in view we have secured, by lease and purchase, the control of all the desirable and standard patints now in use, among which we call attention to the Ohin and Buckeys Patents as combined in this mach ne.
This machine subraces all those valuable features which have contributed to the great success of the Ohio and
Ruckeys Machines, together with a number of entirely new, novel and valuable improvements.

In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great
strength and shaptation to all kinds of work, it will surpass any machine bersicotors offered to the farmer
The following points of excellence show the advantages of Bodge's Resper and Mower over all others:

The Self-Rake applied to this machine has proved a perfort success. It is a Revolving Rake, and does its own recling saving the expense and trouble of a reel, and yet performing better in all kinds of grain than a Reel and Hand Rake can It makes a verfect asparation with the rake head, in all kinds of grain, whether it gried or lodged long or short by reason of the rake revolving over forward, and striking into the uncut grain, or force the size ke, carrying it along and over the platform, and delivering it in compact bundles, at the rear of the machine continuity cut of the way of the team and machine on its next round, and without any littlering whatever.
