INGRAHAMS Combined Marker, Cultivator and Hiller GEORGE B. MENNETT,

This is the most perfect and greatest Labor Paving Machine of the kind now known. The advantages of this implement over all others is not only that it cuts up, but also turns under and subdues the weeds and forms a suitable hill, leaving the soil light and therefore in a condition to retain moisture, which is only done by the extra height and peculiar curve of the tooth. They are made with shafts, or without. They can be adjusted to any width of row. The side teeth can be reversed to turn the soil to or from the rows. This machine is the only implement the farmer needs in the cultivation of corn or other coarse grains, planted or sown in rows. These machines have been thoroughly tested and are warranted to give satisfaction.
