It is generally anders tood that Ten is retailed for a larger advance on its original cost than any other article in the long list of household stores, which may be partially accounted for by recollecting THE GREAT NUMBER AND IMMENSE AMOUNT OF PROFITS which accomulate on it between the cultivation in China and Japan, and the consumers here, including the American Commission House there; the Importer, the Banker who furnishes the exchange; the middle men or speculators: the wholesale grocer, and the retailer. Each of these make large, and many of them enormous profits, from which it is evident that the consumer is compelled to pay many times the original cost for a pure article, or forced to use an adulterated or interior one. This is an immense institution of itself, and is undoubtedly the largest in the country. It is a fact generally understood that a large proportion of the Coffee imported is picked green and the pods opened by artificial heat. This is never so good as that which ripens naturally. The coffee lumported to the United States, and select only the full grown, field-ripened, for them, all the Coffee sond by this Company is ROASTED AND GROUND DAILY, by themselves, insuring its absolute purity and freshness, which they guarantee. The Company are roasting all their coffee on a new principle, which renders them particularly pure, all aclidity being removed by their process of cooking, enabling persons now to take coffee who have been obliged to discontinue-tis use. The Company are doing an immense business in their Coffee Department, and selling more PURE COFFEES than any other house in the country. This is the most perfect and greatest Labor Saving Machine of the kind now known. The advantages of this implement over all otheryls, not only that it cuts up, but also turns under and subdues the weeds and forms a suitable hill, leaving the soil; light and therefore in a condition to retain moisture, which is only done by the extra height and peculiar curve of the tooth. They are made with shafts, or without. They can be adjusted to any width of row. The side teeth can be reversed to turn the soil to or from the rows. This machine is the only implement the farmer needs in the cultivation of corn or other coarse grains, planted or sown in rows.
