How the Currency Law Works. | The White Mountains.

There seems to be little prospect that any part of the \$500,000,000 energiven entrancy provided for by the much talled of law of the last sension gittiny' of congress will be put in elividation This is the opinion of the efficients of the national treasury, whose business it is to watch the financial needs of the country. The banks are well sup

plied with currency to must the de-mands of business, and nothing more is needed. While it was the opinion of the leg

islators and the limmoial experts when the new fdl was under discussion that such a measure would probably never be put into actual opera-

tion, it was believed that legislation of the kind would be immediately beneficial. With the law in existence

the government can at any time put out an emergency currency to meet any strain upon the bank circulation. In other words, danger of stringency

like that which caught the country tast October is next to impossible, and therefore bounding of money by

banks and others when a scare comes on would be useless. Money cannot be cornered and no presidents can be

realized from business menund banks, who must have fouds or go to the wall. With shoop-your pendy for eir minifion at the word, nobody curve to heard currency, and what currency there is will be kept moving and do all the business that is required of noney. So the chief votue of the law

is in its existence. It is a bulwark of southdence, though mute and innetive,
