writer in the Utica Herald writes thus concerning a model dairy which he recently visited: "The morning's milk is set twenty-five hours and the evenings twelve. All the cream is taken off that can be at the expiration of this time. It is allowed to stand over until the next morning after skimming, to take eff acid. Then it is churned, worked, and salted, three-quarters of an ounce of salt to a pound of butter. The the factory is all done by men and boys, it being found too heavy for women. We noticed that the water used was not much above the temperature of brook water, yet the butter seld for the highest ever saw, and better than some we have sible. - English Mechanic. seen where only one mess of milk was skimmed. The superiority of its character is indicated by the last sale, which was at 12 cents in New York."

more, as bruising. Eight stand in a periods of time. The apparatus is row, with their hips to each other, and placed in the imperial traveling carriage. ing can be done on the way as well as in a stable." This car has been in use appearance of the cattle was a matter of

ances the advantages. When threshed ances the advantages. When threshed out, then spread it out on the floor, go over it again thoroughly with the flail—then pass it very slowly through a fanning mill, so as not to blow out the seed (which can be soon learned by examination); then pass it through a sieve fine enough for the clear seed to pass, but retaining the chaff-covered seeds, and thresh the latter again—and so on, till the result of a varied diet of mixed.

A French journal mentions an expecticken and fry it brown, using plenty of flour; have a quart of okra cut fine, there are quart of okra cut fine, the same at the too small, but he wedged himself into it. Getting in and getting out were two different two men to the chair, and two to the man to get them apart. It made lots of fun.

A very young Emily received this letter from her favored admirer:

A NEW medicine for diseased grape consists in inocculating the vine with the pure essence of Eucalyptus globulus, which has lately attracted so much attention in medical circles. A broad incision is made through the bark at the real of the vine in which a few control of the neck of the vine, in which a few drops of the essence are deposited by means of a small camel-hair brush. The result is, that in about three days the phylloxera entirely disappears, while the operation. The incision may be made through any other part of the bark with equal success, but the result obtained recently of the continuation of the two ounces dissolved in a gallon—will cure the inconvenience and prevent any further recurrence of it. It is so simple

ject, an experiment will convince any tected parts remain white; and by proone that this milk, if churned with that tecting the dyed portion, and unwrapof fresh cown is practically lost to. of fresh cows, is practically lost to a butter-dairy. It takes so much longer may be applied.

lecting the dyed portion, and unwraping the white portion, another color put two of sugar, half a one of butter, to churn the cream from a cow nearly dry, that it will not produce butter in

background screen, before which the sitter is placed in order to have his portrait taken, is to be painted before-the top next the neck. hand with the form of the desired "spirit," the paint being composed of MEAT EATERS AND VEGETARIANS, a some fluorescent substance, such as a writer says, "show in their persons the churning is done in dash churns, with invisible to the eye; but it sends out A mixed food of animal and vegetable this painting dries on the screen, it is most brain force and nervoes energy. steam power. The milk is set in deep pails, in a tank of water large enough to contain two messes, and the work of the factors is all done by men and boys.

water, yet the butter sold for the highest prices, the last sale netting the patrons 28 cents. The butter is packed in "return pails," sales made weekly. We saw no signs of ice, and we believe none is used. After examining the butter department, we were naturally anxious to see the cheese. By the judicious use of rennet, heat and acid, the cheese was made mellow and less leathery than skimmed cheese usually is. The skimming was more apparent in the taste skimmed cheese usually is. The skimming was more apparent in the taste than in the texture, but there was not that flat flavor which characterizes "white oak." It is not too much to say "white oak." It is not too much to say that it is the best skimmed cheese we of antimony must be as neutral as pos- by the grandeur of his mental status,

sor Palmieri, of Naples, has recently completed a very ingenious and elabor-New Cattle Cass.—A new cattle car has been invented by Mr. McCarty of Ohio, which is described as follows:

"The car is 36 feet long, and it can carry 16 head of cattle or horses. Each animal has a separate stall, and there is a sliding arrangement attached, which moves with the cattle, so that in sudden movements there is no such thing, any more, as bruising. Eight stand in a completed a very ingenious and elaborate registering thermometer for the private use of the Empress of Russia. The instrument is of metal and is provided with bells, which give a signal whenever any considerable change of the surrounding temperature occurs. It is said to be so sensitive that the indicator is in a state of almost perpetual motion. Suitable devices show the extreme range of temperature during given periods of time. The apparatus is

in a stable." This car has been in use since May, and it has recently been tried on the Pennsylvania Central, between Chicago and New York, and the fine appearance of the cattle was a matter of aniline black with 22 grammes of alcohol and 60 drops of hydrochloric acid. invention.

The paste thus produced is mixed with 1.82 grammes of gum arabic previously discoved in 85 grammes of hot water. If this ink be added to an alcoholic out timothy seed is to thresh it with a fiall—for although a machine will do work more rapidly, yet the seed which it cuts and wastes more than overbal ances the advantages. When threshed general remark. This is a most humane invention.

A porcelain mortar is employed, and the paste thus produced is mixed with the best treatment that could be de-
