I then took hay and soil, and made a heap before the open end, leav-ing only space enough for the hens to

In these they soon hid themselves to way I have had no trouble. To my wledge there has not been an egg eaten since. I consider it now an important point to have the nests well ncealed, not only to gratify the propensity for secreey, but to allow them a little undisturbed rest after laying. I would also add from rather expensive experience, that if size is desired, I ow of no better food than raw eggs; but profit must not be made a question in feeding them in this way .- Cor. Poultry World.

How to Use NAILS,-Every farmer who has had occasion to drive a nail into seasoned oak posts knows its liability to bend and break. If the point be moistened in the mouth it will usually drive more kindly. Oil is still better, but then it is inconvenient to each nail separately into it. Another point observed is that boards become loose eventually from the rusting of the nails, which, communicating to the wood, causes not only an enlarge ment of the nail hole, but the wearing away of the nail itself, rendering the fence or the building shaky and insecure, This may be prevented by heating any rough grease until it smokes and ther pouring it over the nails to be used. The grease will penetrate the pores of the iron, and cause the nail to last, without-rusting, an indefinite period. Besides this no trouble will then be experienced in driving them into the bardest wood. The reason is that the coating of grease prevents contact by for sulphuric acid. air, and consequently oxidation. Oxygen is the great destroyer of iron, and moisture is the inducing cause.

They succeed best with the temperature merely high enough to encourage vegetation, and plenty of moisture, but not enough to

WHILE a poor farm may be of great advantage to a man of energy, it is hard on the boys.

Scientific.

The Health of Farmers have unequaled natural advantages for bealth, strength and longevity. The statistics of diseases and the tables of mortality, however, are against them. This is due not to their vocation, but to their missues of it. No class, as a whole, is probably so utterly reckless of health conditions. So far as our acquaintance with the habits of farmers are unequaled natural advantages for beath, strength and longevity. The statistics of diseases and the tables of mortality, however, are against them. This is due not to their vocation, but to their missues of it. No class, as a whole, is probably so utterly reckless of health conditions. So far as our acquaintance with the habits of farmers is concerned—and it has been extensive —it complete the conclusion, as a rule, that the diethe habits of farmers are worse than those of any other class who have the means of choosing for them acleves. Fried dishes everal times a day, with several fried articles at each of the three meals, is one of their common abominations; dried beef, old there meals is one of their was a great need to make the remainded of the three meals, is one of their common abominations; dried beef, old cheese, and pickles are among the common abominations; dried beef, old cheese, and pickles are among the common relishes, while lard and saleratus make their richer dainties infectious and caustic. We have seen on a farmer's table, fried port, fried eggs, fried of the three meals, is one of their even as a great need to the conditions of the path of the large of the port, fried entry the class whole, is probable of the three meals, is one of their original simplicity the fine plain of the path of the angle of the path of the angle of the path of the same three of the path o make their richer dainties infectious and caustic. We have seen on a farmer's table, fried pork, fried eggs, fried potatoes and fried griddle cakes for breakfast; fried ham, fried hominy, and fried parsnips for dinner; and fried sausages and fried doughnuts for supper—all the frying done in lard. No class is so troubled with canker, erysipelas, tumors cancers, and humors, as farmers; and the excessive use of pork, lard, fine flour, rich cakes and greasy pastry are enough to secount for it. In dietic In dietic encounter each other, and in the course can obtain, is the parure of black pearls. enough to account for it. In dictic encounter each other, and in the course habits our farmers are sadly misled by the agricultural journals, nearly all of which pander to their prejudices, and the same direction of motion that the monds. Mixed with these, they prometidate their morbid appetites by recommending and commending swine breed, around a center which was the sun. mending and commending withe free diagrams of the success of the state out death or dyspepsia. The essential there. It seemed to the speaker that need of our farmers is plain, whole-some food, properly cooked. This would adopt a method of illustrating it would give them much more available which he deemed suitable. If an insect strength for work, relieve them of many of a few hours' existence endeavored to of the distresses and expenses of sick-trace the history of the growth of a ness, add many years to their lives, and tree in which it lived, it could not durrender old age "green" and normal, ing its own life arrive at the truth, instead of dry and decrepit, as it is in the instead of dry and decrepit, as it is in the result of study for ages, the species the result of study for ages, the truth. We know that as one nebulous mass

passes into another, by chemical means, manufacturing, at small cost, one of light is produced. There is evidence the most valuable fertilizers in use from that these nebulæ are gaseous. There the contents of the privy that are too would be one center of aggregation often nearly lost on account of their which would grow continually in size feer a fair trial.

Fessor Daniel Kirkwood took the paths of the asteroids, and arranged them in feer a fair trial.

Fessor Daniel Kirkwood took the paths of the asteroids, and arranged them in fair an earnest, thoughtful people, but Early in spring make a curb of proper of the asteroids, and arranged them in size under cover, and place at the bot-size under cover cover, and place at the bot-size under cover cover. tom a layer of dry muck six inches deep, certain places where, for some distances, or in its absence soil will do, and may there were no asteroids. He noted where the gaps occurred, and he found be advantageously taken from the marginal elevations of ploughed fields. Upon this place a layer of the said contents two inches deep, and thus build up the pile in alternate layers, using two or three times the quantity of muck, covering the whole with it to the depth and would prevent them from traveling, of ten inches. Now save all the liquids his mass being so much greater. This greatly in the majorifys supports the theory that the solar sysgive further evidence of the same. In the star clouds we find a multitude of the star clouds we find a multitude of and an occasion disting of the leaves, stars discernible with the telescope, and stars discernible with the telescope, and dressing grass lands with marked results. Last spring a piece thus treated was far ahead of the rest, and had to we see proof that the sidereal system is methods of culture: I. After blooming, contains all varieties, nebulæ, star cloudlets, and stars of all varieties; and entirely during seasons of rest.
