dances multiplied rapidly, many of them going out of fashion before the end of a month. Not a few of the molern dances were first brought out on the stage.

The cotillon—introduced here under the cotillon introduced here the cotillon introduced here the cotillon introduced here the cotillon intr has not yet been explored by botanists, TILE DRAINS.—Taking off the surplus and the distinctive characteristics of

The power of chemical agency has a singular illustration in its modifying effect upon the properties of cotton. When examined by a lens, the fibre of cotton is found to exist of a flattened or ribboned-shaped tube, but when treated by chemical process, with a cold strong solution of caustic soda, it appears to shrink, and assumes the form of a simple cylinder; thus, three im-portant and very remarkable alterations occur at the same time-that is, the fibre becomes stronger, it acquires increased attraction for coloring matter, and it becomes smaller. In most cases where chemical agency is employed in the preparation of vegetable fibres, either to remove impurities, to destroy color, or indeed for any other purpose, the object in view is generally attained at the sacrifice of a little strength, but in this case there is increased tenacity

imparted. gives a full and clear description of the aggravated, from a compress saturated vast deposits of sulphur occurring in with salt water laid on the eyes, and Iceland, and points out the necessary steps for its utilization. For its ship-ment he recommends the port of Husavik, which is accessible all the year cial to those whose eyesight begins to round, and which is situated very near to the sulphur beds of Lake Myvatu, Krabla, and Reykjahlid. The mines are not only rich and extensive, but easily worked. The sulphur can be supplied at half the cost or that in nished by the Silican mines, which it is ed at half the cost of that furbelieved will soon be exhausted. The earth impregnated with sulphur contains from 50 to 60 per cent, and is from three to six feet in thickness. Vapors arising from the interior of the earth continually deposit fresh supplies.

An Inland Sea. - The French government has voted the sum necessary for the formation of a great inland sea in its Algerian colony. An arid waste of land, 190 miles long by 30 wide, and considerably below the level of the Mediterranean may be submerged by cutting a channel from the latter body of water. It is expected that the result of this measure will be a great improve-ment of the climate in the interior, a great addition to the facilities for inland transportation, and the introduction of ree and civilization into the very heart of Africa. The estimated cost is only three million dollars, and the en-gineering difficulties, after the experi-The juice of ripe tomatoes will remove ence gained during the construction of the stain of walnut from the hands the Suez Canal, will present no serious

SWEDISH BITTERS. OF PERUVIAN +RK.

The Recipe for this Bitters was found among th papers of a Sweedish physician, a single man, who lost his life, when 104 years old, by a fall of his horse. Said recipe then had been kept a profound secret by his family for more than three centuries During all this time they made frequent use of the Bitters, which rendered them a strong and long living set of people, enjoying excitinat health. Originally the secret of preparing the a store and its wonderful effects, was obtained y a softher kin, while participating in the earliest a peditions of the Spaniards in America, after a sole un premise, neverte divalge it but to the pr sun od price
