ter, the ground should be kept clean ture of earth matter in such cases, and mellow. Every farmer knows that a bill of corn or potatoes will not amount to much unless cultivated, and yet there are many who will neglect to give the same care to a tree which is give the same care to a tree which is wire, 6,000; iron, 4,000; inferior bar ounce of food is wasted in harvesting or preparing for market. In the next and mellow. Every farmer knows that shaded, and thereby be in a suitable apple trees in sections where the apple tree borer is abundant, and allow a portion to be checked with weeds and the remainder well cultivated, and then watch the result. From our own experience we believe that the chances are being exempt from this pest.

DEOPSY OF CROP.-When fowls are troubled with this complaint the crop is distended with an ill-swelling liquid, the appetite fails, and the birds are dull and disinclined to move about, In such cases we have opened the crop by making an incision about half an of sharp scissors, and after allowing the liquid to escape, injecting with a common syringe some water and carbonate of magnesia, with which the crop was well washed. The water was allowed and stributed as they are in natural bones. The mass thus prepared is ignited. The difficulty consists in obtaining products of a sufficient density and mineral richness, and free from foreign salts. The difficulty consists in obtaining products of a sufficient density and mineral richness, and free from foreign salts. mate of magnesia, with which the crop-was well washed. The water was re-moved through the opening, the edges of the wound in the crop-were then-of the wound in the crop-were thenafter which the wound in the skin was closed in the same way. The bird was then fed with soaked bread and milk, in which a little magnesia was mixed, for a few days, and it recovered at once. This disease may be prevented by feeding the fowls occasionally with bread and milk, or easily digested food, and giving some prepared chalk or magnesia, or a pinch of copperas along with the food.

periment why is old pasture reputed to be so much better than new? Would not new be as good as old, if sown so thick that the new shall be as thick as the old, say with a bushel of timothy and clover per acre? If not, why is the reason? Why is not course, thinly are washed with water and dried.

PARTRIDGES STEWED.—Stuff the craws with bread-crumbs, a bit of butter, lemon-peel grated, shalot chopped, parsley, pepper, salt, nutmeg, yolk of egg; rub the inside with pepper and salt; half roast them; stew them with the reason? Why is not course, thinly the reason? The other day she returned, lifted eleven children out of the wagon, and entered with bread-crumbs, a bit of butter, lemon-peel grated, shalot chopped, parsley, pepper, salt, nutmeg, yolk of egg; rub the inside with pepper and salt; half roast them; stew them with the other day she returned, lifted eleven children out of the wagon, and entered the house and took off her things as coolly as if she hadn't been gone over a day.

"What!" exclaimed Mrs. Jones, when her son John and the course, thinly the reason? The other day she returned, lifted eleven children out of the wagon, and entered with bread-crumbs, a bit of butter, lemon-peel grated, shalot chopped, parsley, pepper, salt, nutmeg, yolk of egg; rub the inside with pepper and salt; half roast them; stew them with the proper and salt; half roast them; stew them with the course, thinly are the final transfer. and clover per acre? If not, why is the reason? Why is not course, thinly grown pasture, better than old, thick pasturage? Some farmers of high refodder is of little value, and not to be compared with the fodder of corn grown in thin drills, with more space and under the influence of air and slight? If full-grown well developed corn stalks are, like well-grown fruit, richer and better than small and thickly grown, why will not the rule apply to grass? is not enough on an acre to satisfy a thrifty farmer. Hence the old idea of making two spires grow where one

PRUNING ROSES.-The time to prune rose bushes depends entirely upon the class or family of roses to be pruned.

Without going into a systematic conpostal law allows 15 grains to be taken sideration of the different species of the as the equivalent of the nominal half roses, for which we have no time just ounce. This is a difference of from three grand divisions of the rose genus, ness house which has many heavy let each of which requires a mode of pru-ning peculiar to itself. For the first class roses that bloom but once a year—probably be a saving of not less than 4 summer roses as they are called—we have always found it best to prune them pretty severely as soon as the percent in postage. It is barely postage, it is barely postage. It is barely postage, it is barely postage, it is barely postage. It is riod of blooming is over, unless it should be very dry, in which case we defer the pruning until just as the fall growth begins. By this course we get an abundance of young spurs or sheets,

DRESSING BLACK HOGS.—A correspon dent says: The principal objection to the Essex and Berkshire breed of hogs I find to be their color. Now, as Youatt, justly observes, this is not skin deep. The coloring matter will be found to be secreted between the true skin and the epidermis or outer skin. If care is taken in scalding black hogs they can be dressed as white as any white hog. It is a well-known princi ple that all black substances absorb heat. Hence in dressing black hogs the water should not be so hot as scalding white ones. Instead of this color being an objection, I regard it as an advantage, for the skin of a black hog will always be found to be smooth and glossy, free from cutaneous eruptions, and always clean.

ASPARAGUS,-Cut off tops and cove the bed with coarse manure. Remove celery and bury in a trench, as deep asthe plants are high as closely as it can be packed, and cover with straw as the advancing cold requires—so says an old market gardener. Fresh planting of rhubarb, asparagus, fruit trees, currants, gooseberries, raspberries and strawberries may be made now with profit, if well done, and the ground mulched where necessary during win

Horses Manes Falling Out,-The shedding of hair from the manes and tails of horses can be prevented by washing the parts affected a few times in carbolic soapsuds. Or a wash made of lard oil, one pint, and aqua ammo-nia, one gill, well mixed and rubbed in, will prevent the falling of the hair. We have found it effectual.

Scientific.

Lyconomy form, field or parts of finds or parts

worth a hundred hills of either of the former. In rich soils trees may grow rapidly without cultivation, and no amount of grass or weeds will retard them; but there are other things besides growth to be looked after. If the weeds and grass are allowed to grow up around the stems of apple, peach or quince trees, the bark will become soft near their base by being shaded, and thereby be in a suitable words. Wire, 6,000; iron, 4,000; inferior bar iron, 2,000; cast iron, 1,000 to 3,000; copper wire, 3,000; silver, 2,000; gold, 2,500; tin, 3,000; cast zinc, 160; cast place, not an ounce more of vegetable, flesh, fish or fowl, groceries or liquids, than is really needed, ever goes into the pot or kettle, or is placed on the table. The wife of every French family knows to a nicety, what quantity of each kind of food is the least that will be standard them. Soo; beach, cedar, white oak, pitch pine, 600; chestnut and maple, 650; poplar, 400. Wood which will bear a heavy weight for a minute or two onts a particle more than that is cooked will break with two-thirds the force. shaded, and thereby be in a suitable condition for the reception of the eggs which will break with two-thirds the force acting a long time. A rod of iron is about ten times as strong as hemp cord. A rope an inch in diameter will bear on the street or manure heap, or flung about two and a half tons; but in practice it is not safe to subject it to pieces of bread and meat, or vegeta a strain of more than about a ton. Half an inch in diameter the strength will be are not bought as to become stale or one quarter as much; a quarter of an spoiled in the cellar or pantry. Servants nine to one in favor of those cultivated inch, one-sixteenth as much; and so on. are never permitted to waste or steal

> ARTIFICIAL BONE BLACK.—The only proaching, in their properties to bone black, consists in impregnating woody matters with phosphate of lime dissolved in hydrochloric acid. The phosphates are thus distributed as they are in natural bones. The many class and dear Thomas are scarce and dear Thomas are scarce and dear Thomas are scarce. small granules in the gray phosphatic pinch of sugar. Keep them on the fire chalk of Ciply.

CRYSTALIZATION OF TIN.—A fine crystalization of tin is obtained as follows: same way. You should have equal CRYSTALIZATION OF TIN .- A fine crys-A platinum capsule is covered with an quantities of each of these vegetables. outer coating of paraffin or wax, leaving Cut out of lettuce and sorrel leaves the bottom only uncovered. This cap-sule is set upon a plate of amalgamated opperas along with the food.
