A simple hand-hammer is, in the abstract one of the most intricate of mechanical agents; that is, its action is more difficult to analyze than that of Crabapple's boy wept over that story many complex machines involving every tit trains of mechanism; but familiarity with hammers makes us everlook this denied a place among those mechanical contrivances to which there has been applied the mistaken name of mechaneal powers.

Let the reader compare a hammer with a wheel and axle, inclined plane, considering its universal use, and he will conclude that if there is a mechanical device that comprehends distinct principles, that device is the common hammer; it seems, indeed, to be one of those things provided to meet a human necessity, without which mechanical industry could not be carried on. In the manipulation of nearly every kind of material, the hammer is continually necessary in order to exert a force beyond what the hands command, unaided by mechanism to multiply their force. A carpenter in driving a spike of a tan yard, grinding bark, which answered all the purposes, for he with comprehends distinct principles, that device is the common hammer; it seems, indeed, to be one of those things provided to meet a human necessity, without which mechanical the bearing heart he approached the manipulation of nearly every kind of material, the hammer is continually necessary in order to exert a force beyond what the hands command, unaided by meetanism to multiply their force. A carpenter in driving a spike of a tan yard, grinding bark, which answered all the purposes, for he witchen stove.

Flowers will be maturing their seed the flumgoid theory valuet, and set if which and more numerous observations than any of the "fungoid theories" of disease which have before engaged the attention of medical men. We are really beginning to see light in the world, and the purpose, if when a layer of a butter the size of a which and more numerous observations than any of the "fungoid theories" of diseases. Now these facts stand upon much surer and more numerous observations than any of the "fungoid theories" of disease which have before engaged the attention of medical men. We are really beginning to see light in the world, and the purpose, if when the purpose, it will not ripe it will not ripe it will not represent the size of a time. The world at different periods through the entire flowers will be maturing their seed at different periods through the entire. The purpose of different periods through the intention of the fo

or in one plane.

There is a promise that the vexations "servant-gal" problem may be solved by an English lady of wealth, Mrs.

Crawshay, who has made berself!

Then he was sent to bed without any Thanksgiving supper at all, and threatened with being deprived of both Christmas and New Years' dinners. Crawshay, who has made herself known to the public in other experimental efforts to revolutionize the world for the better. Out of the nine hundred thousand superfluous females in Great Britain she has succeeded in engaging day's maid, kitchen-maid, dairy maid, and upper house-maid. They are house-maid. They are house-maid. They are house-maid they are superstant the former incambents of these positions. But Mrs. Crawshay treats them as equals while they are "off duty," permits them to mirgle in the drawing-room among they casts of the castle, and takes them by turns riding with her in her carriage. And the experiment so far has been lighly successful. The young laighty successful. The young laighty successful. The young laight successful the increase in height is seldom over a which the flux profits the charge of the turnty—of the camera that has been bound the war that has been dound almost impossible to produce them free from the charge that the di They have had no rows with the mistheir regime have been almost un-In short, Mrs. Crawshay thinks domestic nightmare from the bosoms of housekeepers, and afford means of livelihood to many thousands of well born and intelligent girls, who now have to struggle so hard to obtain places as governesses, companions, school-teachers and clerks. If this lady reformer succeeds in establishing her new system there is hope that relied may ultimately come to mistresses in this country. There is a very large class of American girls who obtain a scanty and miserable living as workers in factories and shops in the cities who are too proud to do house service, though the wages for the latter, all things considered, are four-fold. Properly trained little of house service until they reach these shores. Any thing that promises relief from the present chief trouble of housekeeping will be hailed with de-light by mistresses; and it is needless

## The Explosion of Kitchen Boilers.

Why is it that kitchen-boilers explode? is a question now asked, which s of vital importance to all households in which these boilers are used. Is several severe "accidents"—as they are called—have occurred from the bursting of the "water backs" in the kitchen ranges, some of them resulting fatally. In ranges with which hot water boilers are connected, there are cast iron compariments containing water, located in the rear of the grate of the range, and these furnish the boilers with the supply of hot water. These "water backs," as they are technically termed, are really the boilers, the boiler at the side of the range being merely the hot water boilers, as they are technically termed, are really the boilers, the boiler at the side of the range being merely the hot water boilers, as they are technically termed, are really the boilers, the boiler at the side of the range being merely the hot water boilers, in the same breath giving as were correctly, the question was and even through the built to heifers of his stock; for they will be easy or hard of cows is trangely deformed, and they rapidly became agglomerated into height passed if any of the scholars thought the firm mother to offspring, and even through the built to heifers of his stock; for they will be easy or hard of cows is transmitted from mother to offspring, and even through the built of heifers of his stock; for they will be easy or hard of cows is transmitted from mother to offspring, and even through the built of heifers of his stock; for they will be easy or hard of cows is transmitted from mother to offspring, and even through the built of heifers of his stock; for they will be easy or hard of cows is transmitted from mother to offspring, and even through the built of heifers of his stock; for they will be easy or hard of cows is transmitted from mother to offspring, and even through the built of heifers of his stock; for they will be easy or hard of cows is transmitted from mother to offspring, and even through the built of heifers of his stock; for they will be easy or hard of cows is transmitted from mother to offspring, and even through the built of heifers of his stock; for they will b

with a wheel and axle, inclined plane, screw, or lever, as an agent for concentrating and applying power, noting the too far off, and he couldn't make much principles of its action first, and then of a voyage in a week, anyhow. He got considering its universal use, and he a job in a tan yard, grinding bark, will conclude that if there is a mechan-

machine, and set but in one direction or in one plane. Then he was sent to bed without any

## Hand Spun Silks.

The frequent disappointments which ladies experience in the wear of black silks are partly attributed to the use of loaded chemical dyes (which cause the best workmen to do so have proved unavailing. This accounts for the supe nor thievish, and breakages and carpet- rior excellence of the hand-spun cachemire silks, each piece of which is made in the good old-fashioned way by skilled weavers on looms at their own homes, that she has found a way to lift the thus fulfilling the true conditions under which fine silks can alone be produced, insuring more reliable wear, rendering them less apt to wear shiny, and giving them that soft, mellow, satin finish so sought after by all consumers. - Translated from the Paris Journal.

Decline in Trades Unions. If we may believe the statements organizations in that city. Various causes are assigned for this decline, but the one most generally accepted is that it finds its justification in the sufferings from the strikes which the unions are to say that Mrs. Crawshay's forth-coming pamphlet, in which she will give the details and relate the results a preference for non-society men, and alleged to have precipitated. Employof her experiment, will be looked for with much interest. the rule in that city seems to be that in most cases where skilled mechanics have withdrawn from unions they have experienced no difficulty in obtaining situations.

## Wagging Another Bone.

A New Hampshire school teacher defective work, or inferior quality of lately was questioning one of his classes material the cause, or is it the result of ignorance and carelessness in the kitchen people? Which a short time swinging the other foot and limb, he several severe "accidents"-as they are inquired how many bones he was mov-

kitchen stove.

Flowers will be maturing their seed at different periods through the entire

Repressing a canning force expended throughout a limited distance.

Considered as a mechanical agent, the hammer concentrates the power of the arms and applies it in a manner that meets the requirements of the work. If great force is needed, a long swing and slow blows accomplish tons; if but little force required, a short swing and rapid blows will serve, the degree of force being not only continually at control, but the direction at which it is applied also. Other mechanism, if used instead of hammers to perform the same duty, would from its it has acquired, in addition to that, a present in immense quantities, both in large amount of sulphur, a portion of which is in a free state, and if exposed it will unite with the oxygen of the attribute of the surface. At present, Dr. Kline has not published figures of istence being about eight inches. The alone with barnyard manure if diately covered up with soil,-Massa-chusetts Ploughman,
