

Capabilities of an acre.—J. M. Smith, a market gardener of Green Bay, furnishes some interesting statements of experiments in high culture. He has found the rule invariable, not a single exception to it, that the more he has spent in cultivating and manuring, the greater have been the profits per acre.

How to Keep Meat.—A farmer's wife wrote from Venice, Cayuga county, New York, telling the farmer a plan how to keep meat fresh a long time: "There is no good reason why farmers and their families should eat so much cold pork, leaving all the fresh meat to the inhabitants of cities and villages when the following method will keep meat fresh for weeks, even if used for more than ten years.

The Importance of Knowledge.—Detroit Free Press: She said she had a fine lot of eggs, but while the grocer was counting them out she asked the price. "He told her, and she shrieked: 'Seventeen cents!' 'Seventeen cents?' 'Yes, ma'am.' 'Why, that's outrageous!' 'Well, it's hard times, and everything is up.'

Use of Carbonic Acid Gas in Drying and Preserving Timber.—According to a recent patent, most carbonic acid gas may be used advantageously in drying and preserving timber. For this purpose the timber to be dried is placed in a properly constructed chamber, and a fire lighted underneath, or hot gases conveyed through the chamber, so as to produce the necessary temperature.

Swiss Process of Ventilation.—A new process of ventilation is now being tried in St. George's Hospital, London. It is called the Tobin system, and goes solely upon the vertical principle. It is based upon the fact that as it may through the fireplace, it introduces into the room a bulk of warm atmosphere. Instead of being let down from above, the warm air is introduced from below, with the result of abolishing dangerous draughts.

Leaf Clover the People. The FOUR LEAF CLOVER. In our Announcements last Fall have had half a year's growth and ONE PRICE, CASH DOWN, RETURN THE MONEY, RELIABLE GUARANTEE shall be our 4 Rallying Words 4 Another Season, Oak Hall WITH \$1,000,000 OF Men's and Boys' Clothing

He appears to regard constant cultivation, especially through drought, in connection with copious manuring, as all-important. Stable manure is the standard, with such use of superphosphates, plaster, lime, ashes, and other manures as experience and good sense point out.

Cheep Cookery.—We noticed, while visiting a large steel-making establishment recently, that the workmen at the blast furnaces utilized the inputs of steel, which lay cooling in the yard, as cooking stoves, and seemingly prepared their dinner over the heat of metal as easily as over a fire. The idea is a good one, and might be adopted with advantage by the men in all metal-working concerns.

During the rain lately, a party stepped into Merrill's grocery and asked for the loan of an umbrella. He was promptly accommodated. "You're a pretty obliging man," observed a customer, after the stranger stepped out.

A substitute for natural leather is described in the French journals as now coming into use in various kinds of harness, such as in the shafts of carriages, in the harness of the carriage, in the harness of the carriage, in the harness of the carriage.

Another Steam Horse.—Mr. Fortin Herbin, of Le Havre, has invented a machine which is moved by articulated feet which are successively planted upon the ground. Two feet act from the front body and two from the rear, being pressed downward by steam, which, besides, is a horizontal engine, oscillating in a vertical position.

Measurement of Solar Radiation.—Messrs. Fortin and Le Havre, in order to obtain an instrument whereby comparative observations of the amount of solar radiation can be made, various experiments were made, and the apparatus was constructed by the Rev. Mr. Stow and others; and Mr. Symons has shown that this object is attained by the use of a mercurial thermometer.
