Advertisement for 'BENNETT & CO.' featuring 'CLOTHING BAZAAR' and 'SHOW CASES!' at 518 Market Street, Philadelphia.

THE MODEL FARMER.—The model farmer can be found in every neighborhood. You may even tramp over half a century possibly without meeting him.

UNPAID ROOMS.—A writer in the Country Gentleman says: "I pass some houses in every town where windows might as well be sealed in with the walls for any purpose they have but to let in light."

PUNCH JELLY.—Take two calves' feet and chop them into convenient pieces and put them in a boiler with two quarts of water, set the saucepan on the fire; directly the water boils throw it away and wash the pieces carefully, then put them on again in two quarts of cold water, and let them boil slowly for three hours, removing the scum carefully during the process.

WEDDING CAKE.—One pound of butter, one pound of sugar, one pound of flour, three pounds of clean currants, two pounds of stoned raisins, one-half teacup of wine or brandy, from one-half to three-quarters pound of citron, one good ounce, some mace and cinnamon. Rub the butter and sugar together; when light, add first the yolks then the whites of the eggs—beaten separately—then put in nearly all your flour, keeping out just enough to dust your raisins and cement them.

COUGHING.—The best method of easing a cough is to resist it with all the force possible, until the accumulation of phlegm becomes greater; then there is something to cough against, and it comes up much easier, and with less coughing. A great deal of hacking and coughing in invalids is purely nervous, or the result of mere habit, as is shown by the frequency with which it occurs in the patient.

COALS ASHES FOR PEAR TREES.—Coal ashes have a wonderful effect upon pear trees, especially those growing in light soil. Our ashes of last winter were used around trees in liberal quantities, and those thus treated have outgrown anything in the orchard.

ANIMAL PHOSPHORESCENCE.—Among the experiments of H. S. Porcupine, the least strange in the group of phenomena known under the name of phosphorescence, is that of the glow of a soldier about to embark for Madras.

THE ELECTRIC LIGHTHOUSE AT SOUTH FORELAND.—In the lighthouse at South Foreland the electric light is employed, and the electric current is generated by a dynamo, which is driven by a steam engine.

FOUR'S COLLECT.—A young man who was inconsiderate enough to "come in" after he had escorted a girl home from a party, was told by her father to give him a right good wash, but four times a year; out in the Spring, out in the Summer, out in the Fall, and out in the Winter. However, some children keep dirt so near their noses.

SCIENTIFIC REMARK.—A lecturer on optics, explaining the mechanism of the organ of vision, remarked, "Let any man gaze closely at a wife's eyes, and he will see himself looking so exceedingly small that—" Here the lecturer's voice was drowned by the shouts of laughter and applause which greeted his scientific remark.

THE WOODEN KEY.—The inventor has lately exhibited in Philadelphia a new kind of key, which is made of a hollow brass cap, with a perforated round plate, about two feet high, from which extend two hollow brass arms an inch in diameter, at right angles to each other.

REMAINS OF THE BRONZE AGE.—At Gmunden, in Upper Austria, were very recently discovered the remains of an undisturbed Aluvial deposit, some bones of animals, among which were the cubitus of a dog belonging to a race which is now frequently found in the Alps.

WHAT THE MICROSCOPE REVEALS.—Leewenhoeck tells us of an insect seven millions would only equal a mile. Insects of various kinds may be seen in the cavities of a grain of sand. Mould is a forest of beautiful trees, with the branches, leaves and fruit.

SOME BARS WHO LEFT HOME.—In the beautiful gardens in the Regent's Park, London, a Zoological Society entertains a crowd of distinguished guests, trying with true hospitality to make them feel at home.

THE MOON AND THE WEATHER.—The notion that the moon exerts an influence on the weather is so deeply rooted that, notwithstanding all the attacks which have been made against it since meteorology has been seriously studied, it continues to retain its hold.

HOW TO GET RICH.—"There is no secret about it," said Commodore Vanderbilt; "all you have to do is to attend to your business."

MAMMA, WHO IS THE BETTER.—Two little girls stood at their mother's knee one day. The elder was twelve years of age. Dolly was dark and Dora fair. They were very fond of each other, and were made much of by all the household.

THE WOODEN KEY.—The inventor has lately exhibited in Philadelphia a new kind of key, which is made of a hollow brass cap, with a perforated round plate, about two feet high, from which extend two hollow brass arms an inch in diameter, at right angles to each other.
