these regards, when these essentials are fulfilled, the lost art of conversation will revive; hospitality will be worthy of the name; and householding housekeeping become, as they ought to be, the greatest pleasure a man can have.

## Business Hours in England and America.

There are few facts in the busines life of America which strike an Englishman more forcibly than the absorbing character of each man's pursuits, and the severity of the labor he subjects day, after having been closed for eleven himself. In London the tradesman can scarcely be said to have commenced the fectly successful, and though involving busine-s of the day before 9 a.m., the only exception being those who minister to the early breakfast wants of the it would not be worth while securing at community. The merchant is rarely at his office before 10 in the morning, and This plan would be very serviceable the clerks and secretaies in the Govern- for the curing of late cut crops of fodment establishments are not at their der, for the proper drying of which the posts much before II a. m. The amount lateness of the season might present of work accomplished by the two last-named classes is interrupted by a fre-

quent gossip, the perusal of a newspa-per, and a prolonged lunch, and nearly all quit their desks for the day at 4 p. m. The American employe, on the other hand, is often at his office at 5 a. , many tradesmen open their stores at 6 or 7 a. m., and during a long day tates better and more careful work. the attention to duty is incessant, only To plant corn with a drill successfully broken by half an hour allotted to it is necessary that the sod lunch. Perhaps there is too much work done on one side and too little on the left upon the surface to interfere with other. In America we press into the regular dropping of the seed; not twenty-four hours as much severe labor as the human frame can bear; in Eng-land men do as little as they possibly and this indirect benefit is not the least can. My personal experience e of the public offices is not great, but 1 accepted the use of farm machines.

a position in the India office for a few nths during the tenancy of the Secretaryship by the Duke of Argyll, and this is how the work was done. On en tering upon my duties I inquired at what hour I might be expected to be present, The Assistant Secretary turned to the senior clerk of the department, and asked him at what hour he usually came. "Oh," he replied, "about ten-an easy ten-say half-past ten." "Good," I rejoined. "I will be here at half-past ten." The next day I was at my post. Not a soul had arrived ! There is an office for the messengers, as they are called, in each corridor, of which there are six in the India office. I asked the head messenger, an old man of 60, when the clerks might be expected. all the broad-leaved crops-corn, potawhen the clerks hight be expected. "Sir," he answered, "they rarely come before 11 o'clock, and often later." Sure enough, it was a quarter past 11 before they began to drop in. To change their coats, arrange their papers, and interchange matutinal civilities occutheir coats, arrange their papers, and interchange matutinal civilities occu-by rains. There is no reason why it pied the time until noon. Then the work began.

## A Chinaman on Consumption

ers.

VALUE OF THE ASHES OF CORN-COBS. The following is an extract from a -If it was generally known that corn-obs contain twice as much carbonate Chinese book on consumption : "Man is formed from the five elements-me-"Man tal, fire, water, wood, and earth. The lungs belong to metal, and rule over the breath and skin. The heart be-longs to fire, and the kidneys to water. When the water cannot control the fire, the latter ascends and cuts through the metal, causing cough and exces-sive perspiration. The liver belongs to wood, and is the receptacle of the blood. Fire cuts through wood, and hæmoptysis occurs. Hence consumption manifests itself chiefly in spring and autumn. When the disease is of long standing the body becomes ema-ciated and the face white, in conse-quence of the breath and blood being edy.

attenuated. The stomach belongs to wood cuts through earth, and the stomach becomes deteriorated, produc-ing loss of appetite."

as soon as it is cool, and the exhausted gallon of the sheep wash contains the essence of 24 ozs. of strong American leaf. The preparation, which is algallon of the sheep wash contains the essence of 24 ozs. of strong American leaf. The preparation, which is al-lowed to be sold free of duty, has found favor not only among breeders of sheep but among agriculturists ard gardeners as an effective vermin destroyer .urnal of Applied Chemistry.

The process of curing hay by pre-serving it in deep trenches, and covering with a thick layer of earth, is being extensively adopted with satisfactory results in many parts of Europe.

correspondent of a foreign journal de scribes his method as follows: "Th "The grass was put into a pit six feet deep, quite wet, on the day it was cut, covered up to a deptn of 18 inches with earth; the pit was opened the other glass easily, and are accumulated on the boiler, in which they speedily pro-duce an ebullition of the water and steam sufficient to drive a miniature pie-crust, engine. By increasing the dimensions of the apparatus, the inventor has ob-tained a utilizable force, and produced, after three-quarters of an hours exposure to the sun, a boiler pressure of sixty pounds of steam, which appears

to be the most important result yet ob THE USE OF MACHINERY .- The use of tained by this means. machinery upon the farm is doubly beneficial. It not only reduces the labor, lessens the cost of products, saves time, and enables a larger surface to be cultivated, but it actually necessi-with an electrical light, in order to current is produced by a Gramme elecfrom 9,500 to 1,000 turns per minute, and affording a light equal to 150 carcel burners. An ingenious device plaand this indirect benefit is not the least by any means of those that we gain by ces the control of the light in the han

CORN CORS .- One of our city exchanges, says the Ohio Farmer, objects to using corn cobs for fuel. They are too valuable. He recommends covering them with a plaster of oil, meal, bran, etc., and feeding to cows. The two minutes. plan is fully equal to that suggested by a correspondent of another paper, to keep shade trees out of pasture to pre vent cows from getting lazy. One cheats the poor brutes into eating that which is unnutricious and unpalatable, and the other forces them to eat by depriv-ing them of shelter from the hot sun; at least that is the intention.

same inventor has also increased the distance at which a green light is visi-ble. A white light is observed twenty miles, a red only four miles, while a green has hitherto been limited to a mile and a half. This genius has suc-ceeded in making the green visible as far as the red or some four miles. PLASTER.-Ground plaster (gypsum) is a cheap and valuable fertilizer for Hard Glass .- We shall never, we fear, hear an end of new methods for hardening glass. R.
