

MOVE ON. The bright, sunny rays keep on flowing. Along by the banks and the braes. And not one Summer blossom stops growing. No matter how dark are the days.

The Eyes in the Bust.

In the winter of 1842, a gentleman and his daughter, a young lady, while traveling through Canada, arrived about midnight at an old-fashioned tavern. The gentleman concluded to stop there instead of going on to the village of S—, which was ten miles distant, and which they had thought to reach.

up and looked out. Beckoning to her father, who came, she said, or rather whispered: "You see this shed, Father? Well, they probably come up on it and get through the window. I do not think they will make the attack before twelve, so I will get out of this window, jump from this shed, go to the barn and take my horse and go to— for help."

Funeral.

A worthy artisan desired those who saw him to his grave to wear white but black, and to carry white flowers in their button-holes, as he wished the ceremony to be considered more an occasion for rejoicing than one for mourning.

he saw how completely he had been defeated. As the men began to search the room, the landlord protested his innocence, declaring that they had no right to hold him or his men prisoners, or to search the house.

Healthy Houses.

Dr. Richardson has come a little nearer to the level of ordinary life since he startled the world by his picture of a city of health. The kind of house which he recommended is not beyond the reach of any one who is about to build a dwelling for himself, and has strength of mind enough not to be turned from his purpose by the objections which builders are sure to raise in the first instance.

lived to the grave. By the time all this was ascertained, the rogue had taken refuge in America; but after a while he ventured upon a trip to Antwerp, where he was arrested and delivered to the French authorities.

British and American Contrasts.

The American people have this great quality—and have it, we think, in an even higher degree than the English—the quality of being sobered by the very presence of danger. There is no people among whom what seems certain to lead to mischief goes closer to the verge of the most alarming catastrophe, and yet none among whom we can feel certain that the immediate presence of imminent danger, instead of exciting them to the fatal plunge, will brace their nerves, clear their head, and reduce to sober seriousness the very leaders who, before the peril was imminent, were the hottest partisans of the policy of danger.

lashed to textile fabrics, for making plasters to take the impressions, and finally in the kitchen for making jellies. The amount of caviar consumed in the United States is large, and it is almost wholly imported. The market prices obtained from the commission and shipping merchants of New York are sufficiently large to make the business a very profitable one.

Curlew and Insignias.

In a recent number of the New York Times we observe a lengthy communication written by Prof. James W. Miller, Assistant U. S. Commissioner of Fisheries, to Professor Henry, in which he fully explained the process by which caviar is manufactured. The same writer also gives a detailed account, in the manner in which linguis is manufactured from fish bladders.
