HE WOULD NOT TAKE OFF A FOOT the cause of sun stroke and what is best to be done in such a case:

It is claimed that it occurs from, or is indicated by a cossation of perspiration. The moment a man at work in the hot sun ceases to sweat he is in danger of sunstroke, and should at once quit work and supply the deficient moisture of the skin with water. This is indispensable to the reduction of the accumulated heat of the body. Water is the resource when the body is subjected to an inordinate temperature. After too long a draught upon the system perspiration falls, and, nothing will then avert sunstroke but the timely use of water to the surface.
