discomfited divine.

Iron Ships .- The iron employed in glad that I need not. I calculate that had I need not. I calculate that had I chosen to have my name lettered on its front, it would have remained there to honor me as a building long after it had ceased to have any long after it had ceased to have any compared the clusters. According to one of the clusters. According to one of the clusters, a complete that had lead to a prompt the shell, the points attacked being the shell the shell the shell the she much land is required for the support of a cow? This question depends for an answer so much on the circumstances of the soil as not to admit of a the iron of the vessel, instead of bolts, very definite answer. In a dairy com- rivets or other instruments, being filled rivets of other instruments, being interest and the blackberry pudding. The latter prize dairy, of sixteen cows, was kept on thirty acres of land; with sea water, renewed every day. Plates of zinc between windows circulate in the ship's interior, and hoop the latter quart of blackberries, a quart of flour, cows, was kept on thirty acres of land; the second premium dairy of eighteen cows, on sixty acres; the third dairy of cows, on sixty acres; the third dairy of voirs. In the course of exidation, the

land. In Beigium ten acres of land sup-port two cows, one heifer and one year-new systems of telemeters have lately a teaspoonful of salt; boil, stirringly, port two cows, one heifer and one yearling, or calf; but when the calves are
sold off young, and cows in full milk
are only kept, the proportion is two
cows to seven and a half acres. Colman
estimates three acres of pasture as requisite for a cow in Berkshire county,
Mass., while for some cowstwo acres of
pasturage are sufficient. Mr. Farrington, in the Report of the American
Dairymen's Association, thinks that, on
an average, four acres are required per
cow, for summer and winter keep;
while Mr. X. A. Willard thinks that in
Herkimer county, N. Y., one and a half
to two acres of pasture per cow will anto two acres of pasture per cow will anew systems of telemeters have lately
come into use in German coast batteries.
They are based, like all others, on the
principle of measuring a base line and
of angles at the base, in order to determine, with the aid of tables, the height
of the triangle. Without giving details
of construction, it is simply stated that
the two observers communicate their
results obtained at either extremity by
electricity, and they are also in electric
communication with the place where
the commander of the battery is. In
the one instrument, made by Yarit, the
electricity merely communicates by telegraphic signs the angles obtained; in
association with animal food, and found well and starting and the weighted so the property of the frangle. Without giving death and some execution, it is simply stated that an average, four arrest are required per cow, for summer and winner keeping of the some execution, it is simply stated that an average four arrest are required per cow, for summer and winner keeping of the weight of the some execution, it is simply stated that an average four arrest are required per cow, for summer and winner keeping of the weight of the some execution, it is simply stated that an average four arrest are required per cow, for summer and winner keeping of the weight of the some communication with the place where the communication with the place when the place with the solid of the least of of
