## Market Culture of Lavender in England.

which Mitcham may be considered the centre. Formerly the lavender planta-tions of Surrey were confined to the of wheat, or one peck, if uniformly dis-tributed, would serve to place the seed of wheat exactly rise inches apart over tions of Surrey were confined to the parish of Mitcham, but of late years, to the entire acre. Two pecks would enkeep pace with the requirements of the manufacturers, it has been found ne-cessary to considerably extend the area, and plantations of vast extent are now and plantations of vast extent are now to be met with in Beddington, Walling-ton, Sutton and Carshalton, and it is have held that they will do so. The computed that in this district there are risk is, however, very great, and it is at least 300 acres under lavender. It is now about eighteen years since the some extent; for she, if careful in many now about eighteen years since the first plantations were formed in Bed-dington, and from thence the culture has extended to the adjoining parishes, particularly those on the south and west, and in passing at the present time through the lanes or footpaths therefore, do not be led away by the that intersect the fields, the eye is at-tracted on all sides by broad sheats tracted on all sides by broad sheets consideration of all the circumstance of color. Lavender culture now forms These will point in the direction indian industry of no small importance to cated, unless in peculiar cases, when a

 A contract of the product of the produ flowers, although not so large in bulk as that produced by the flowers of Lav-andula spice, is of much finer quality, and is alone employed in the manufac-and officers and committees should ture of the finest perfumes. The oil strive to have the tests applied in a obtained from the last mentioned of the practical way.

two species is rather green in color, and lavender, are prepared, and this in its If only a few are to be budded, the bes turn is sometimes adulterated with time is about 10th to 15th of August, spirits of turpentine. The harvesting of the flowers takes place at the end of July or the beginning of August, ac-cording to the maximum dependence of the dependence of the dependence of the dependence of the maximum dependence of the dep cording to the season, the proper mo-ment for cutting the spikes being just is checked, and when trees are on sandy as the flowers are opening, as they are soil especially, they soon stop growth; then more powerfully aromatic, and consequently yield an oil of greater value than when fully expanded. The budding, and those not already done, acres of wild pepterminit that great fears of my whole crop being destroyed by them after it was housed; but having two acres of wild pepterminit that great is a set of the set of the set of the acres of wild pepterminit that great is a set of the set cutting is done with the sickle, and should be done in the next ten days if and tie up in mats, for when exposed are exceptional seasons, but this has to the rays of the sun for any length of years. time after cutting, the yield of oil is materially reduced in consequence. The distillery too quickly after their removal from the plants. Large quantities of lavender flowers are sent to Convent Garden annually, and from thence find their way to the shops and coster's barrows, for there is still a demand for them for tilling muslin bags to stow away in drawers and complexed and away in drawers and cupboards, not- his treatment: "If you desire to get a has always succeeded in avoiding any withstanding the facilities which exist for obtaining the essential oil, and la-vender water and other perfumes into which it enters. The flowers, it should be remembered, are put into drawers and wardrobes as an antidote to moths your cow will give twenty-five per cenas well as for imparting an agreeable odor to the articles placed in these receptacles. A few drops of the oil will, water unless very thirsty; but this mess however, serve the same purpose, and she will drink most any time and ask it has been ascertained by experiment for more. The amount of drink necesthat if a single drop is placed in a small box along with a living insect the in box along with a living insect, the insect will be killed almost immediately. LATE POTATOES .- As a measure of The distillation of the flowers is a busi-ness quite distinct from that of their beetle that can be found should be destroyed. A Former Suez Canal.

"The idea of a canal through the Isthmus was considered practicable, and the excavation actually commenced upwards of two thousand five hundred years ago; and in the reign of Ptolemy Philadelphus, King of Egypt, two hun-dred and seventy-three years before the Christian era, the union of the two seas was perfected. This canal passed very near along the same track as its modern upwards of two thousand five hundred near along the same track as its modern fall with crushing force. At this a call onto her for assistance, and blast the card to sulphurous vapors, such as site of the present town of Suez, and general rush was made for safety, in my eyes if she won't pull herself clear are developed when sulphuret of iron site of the present town of Suez, and was of sufficient depth and breadth to allow of the passage of galleys of con-siderable size. Moreover, it is an his-torical fact that in the year 31 B. C., Cleopatra after the battle of Actium, seeing that the forces of Egypt were ted to take her fleet through into the Red Sea, withe view of escaping into a distant land a project which failed in consequence of the hostility of the Arcos inhabiting that part of the country the canal passed through. The channel existed for ser-centuries after Cleopatra's time, but became gradually blocked up and ob-literated by the then unconquerable sand. A little girl was asked, "What is sand. A little girl was asked, "What is and little girl was asked, "What is sand. ted to take her fleet through into the
