Why are fat people always complain-ing? asks some one who entertains the popular though erroneous notion that health is synonymous with fat. Fat people complain because they are diseased. Obesity is an abnormal condition of the system, in which the saccharine and pleaginous elements of the food are assimilated to the partial exclusion of the muscle-forming and brain producing elements. In proof of this, it is only necessary to assert the well-known fact that excessively fat people are never strong, and seldom distinguished for mental powers or activity. Besides, they are the easy prey of noute and epidemic diseases, and they are the frequent victims of gout, heart diseases, and apoplexy. Allan's Anti Fat is the only known remedy for this disease. It tains no acid, is absolutely harmless,
