Monkey Sagacity.

It was in a wild, dreary part of the country, in the plains of India, while journeying, that one day a friend and self, says a correspondent, sat down un der the shade of an umbrageous banvan tree, and we were enjoying a meal of various edibles, to be washed down by a bottle of Bass's best, when we were disturbed by the arrival and the noise of a troop of large black-faced monkeys-the branches overhead literally swarmed with them. They looked on us as interlopers, no doubt, and for some time their gestures appeared so menacing that we were apprehensive they would dispute the ground with us. But, after a time, things seemed to scitle down, and we went on with our repast in peace. We had just risen from our meal, and were stroll- over the surface, concealing the pots ing forth from under the shade, and adding greatly to the beauty of the whole. when, to our surprise, one of the mon-

keys, a young one, fell down from a high branch at our feet. It was quite dead. The clamor that rose above us, on the occurrence of this calamity, was deafening. The whole assembly of monkeys clustered together for a confab. Long and loud were the chatterings and varied the grimaces of the tribe, each individual vying with the other in the loudness of his tongue. Their looks and gestures made it apparent that they suspected us as being the cause of the death of their juvenile comrade; and, had we had guns in our hands, or any other murderous weapons, we should no doubt have been set upon and maltreated. But we were unarmed, and the good sense of the monkeys seemed to tell them that there must be some other culprit. Having come to this conclusion, one monkey apparently the senior and leader of the whole tribe, separated himself from the rest, ran to the spot on the branch whence the monkey had fallen, examined it carefully, smelt the branch, and then glided nimbly down one of the pillars or pendant roots, with which the banyan-tree is so richly furnished, and came to the corpse of the monkey, took it up, examined it minutely, particularly the shoulder, where there was a wound-not a gun-shot, but one smaller. Instinct immediately turned suspicion into certainty. He placed

the corpse on the ground again, and, turning his gaze in every direction, endeavored to pierce the foliage in his search for the murderer. After a lit-

tle while something seemed to rivet his the while something scened to river his attention; it was but for a moment— the next instant he had mounted the critic triumph over philosophy. There are only two heavens—one clutch, had seized a long whipsnake clutch, had seized a long whipsnake
